construction industry However embracing such technologies could also induce unintended adverse consequences for the safety health and well being of construction workers Therefore the realisation of the opportunities as well as the mitigation of potentially adverse consequences requires research informed holistic insights around the union of Industry 4 0 and construction occupational safety and health management This cutting edge volume addresses a significant gap in literature by bringing together experienced academics and researchers to highlight the drivers opportunities and drawbacks of the merging of Industry 4 0 with construction health safety and well being After a detailed introductory section which highlights key issues and challenges section one covers the application of a broad range of digital technologies then section two discusses the application of industrial production and cyber physical systems in the context of construction safety and health management Readers from a broad range of AEC backgrounds as well as safety professionals and technologists will come to understand how the technologies are applied and the resulting OSH benefits as well as potential drawbacks

**Safety of Electromedical Devices** Norbert Leitgeb, 2010-05-06 Preface Development in the field of medical technology has resulted in a manifold of medical devices enabling us to diagnose illnesses more reliably treat them more efficiently and compensate for handicaps more effectively However these improvements are also associated with safety risks Today patients are in contact with an increasing number of medical devices longer and more intensively than before Applied parts are put into contact with the body probes may be introduced into the body via natural or surgical orifices and even whole devices may be implanted for many years The application of devices is no longer restricted to medical locations only Home use by lay people is increasing and involves even critical devices such as for dialysis nerve and muscle stimulation and ventilation In contrast to users patients are in a special situation Their life could depend on the performance of a device they might be unconscious may have impaired reactions or have been made insensitive to pain by medication and hence they may be exposed to hazards without their awareness and protection by their own reaction Therefore medical devices must meet particularly stringent safety requirements However the question arises how safe is safe enough The readiness to accept risks depends on a variety of accompanying circumstances In fact subjective risk perception varies among individuals and differs from country to country and frequently only in rare cases it is in agreement with assessments of objective scientific analyses
