A System-Theoretic Safety Engineering Approach for Software-Intensive Systems Asim Ali Ahmed

Abdulkhaleq, 2017-02-23 Software safety is a crucial aspect during the development of modern safety critical systems However safety is a system level property and therefore must be considered at the system level to ensure the whole system s safety In the software development process formal verification and functional testing are complementary approaches which are used to verify the functional correctness of software however even perfectly reliable software could lead to an accident The correctness of software cannot ensure the safe operation of safety critical software systems Therefore developing safety critical software requires a more systematic software and safety engineering process that enables the software and safety engineers to recognize the potential software risks For this purpose this dissertation introduces a comprehensive safety engineering approach based on STPA for Software Intensive Systems called STPA SwISs which provides seamless STPA safety analysis and software safety verification activities to allow the software and safety engineers to work together during the software development for safety critical systems and help them to recognize the associated software risks at the system level
