**The Galactic Supermassive Black Hole** Fulvio Melia, 2020-12-08 Here one of the world's leading astrophysicists provides the first comprehensive and logically structured overview of the many ideas and discoveries pertaining to the supermassive black hole at the galactic center known as Sagittarius A. By far the closest galactic nucleus in the universe, Sagittarius A alone can provide us with a realistic expectation of learning about the physics of strong gravitational fields and the impact of such fields on the behavior of matter and radiation under severe physical conditions. Its proximity may even provide the opportunity to directly test one of general relativity's most enigmatic predictions: the existence of closed pockets of space-time hidden behind an event horizon. The plethora of research on Sagittarius A since its discovery in 1974 has long seemed an interwoven pattern of loose threads. No one has successfully synthesized this growing body of work into a manageable, coherent book both for professional researchers and for students taking courses focusing on black holes and galactic nuclei until now. With Fulvio Melia's *The Galactic Supermassive Black Hole*, readers finally have at their disposal a one-volume crucible of essential ideas, logically streamlined but with thorough references for those wishing to explore the various topics in greater depth.

[Proceedings of the Galactic Center Workshop 2002, Astronomische Nachrichten Supplementary Issue 1/2003](#) Angela Coter, Sera Markoff, Thomas R. Geballe, Heino Falcke, 2008-09-26 Our knowledge of the environment of the nucleus of our galaxy has been greatly enhanced by more extensive and sensitive observations at radio and infrared wavelengths, the advent of high-resolution x-ray imaging and spectroscopy, and considerable theoretical activity to understand the nucleus and its components and their activity. The Galactic Center Workshop 2002 was organized to review recent research on the galactic center, including the latest state of the art observations and important theoretical developments. The workshop covered phenomena on scales ranging from the central several hundred parsecs to the central parsec and within. Each topic was approached from both multi-wavelength observational and theoretical perspectives.
