preserved in the minds of men for millennia Humanity first populated the heavens with gods and mystical figures capable of flying people had colonized the lands and ventured into the seas with increasingly better results but the sky above their heads seemed to be unattainable Then some dreamers began to dare inspired by the legend of Icarus improvising wings that tried to imitate the flight of birds From the beginning the exploration of this new frontier caused its victims like the Englishman Oliver who jumped from an elevated tower using a pair of wings or the Italian Damiani some centuries later Leonardo Da Vinci developed a series of studies of the flight of birds projecting some interesting machines such as the ornitopter and the first parachute The Industrial Revolution made available to man the technology necessary to finally build a machine capable of taking flight already in the twentieth century It is not my intention to participate in the eternal discussion about who was the first to fly in my humble opinion the plane was the consequence of a long list of failures and corrections until reaching the objective Each of the crazy dreamers contributed to a greater or lesser degree often sacrificing his own life and to attribute the final result to a single person would be a great injustice to the memory of all of them Leaving aside the origin we can affirm that aviation has been promoted and benefited by the two world wars Between 1914 and 1918 aircraft were transformed as a result of a spectacular evolution and entered the 1920s as a new form of transport after the birth of the first airlines for goods and passengers Let s know details of this evolution between 1914 and 1918 *Eyes All Over the Sky* James Streckfuss,2016-05-19 The impact of the unsung heroes of WWI a must for any aviation enthusiast to further complement work on aerial reconnaissance in modern warfare Roads to the Great War Beyond the heroic deeds of the fighter pilots and bombers of World War I the real value of military aviation lay elsewhere aerial reconnaissance observation and photography impacted the fighting in many ways but little has been written about it Balloons and airplanes regulated artillery fire infantry liaison aircraft followed attacking troops and the retreats of defenders aerial photographers aided operational planners and provided the data for perpetually updated maps and naval airplanes airships and balloons acted as aerial sentinels in a complex anti submarine warfare organization Reconnaissance crews at the Battles of the Marne and Tannenberg averted disaster *Eyes All Over the Sky* fully explores all the aspects of aerial reconnaissance and its previously under appreciated significance Also included are the individual experiences of British American and German airmen true pioneers of aviation warfare With an interesting selection of photos the book is not only an excellent reference it is historically important *Classic Wings* This well researched history belongs on the shelf of anyone with a serious interest in the air war or the ground war of 1914 1918 Steve Suddaby former president of the World War One Historical Association

Reconnaissance and Bomber Aces of World War 1 Jon Guttman,2015-01-20 Often overshadowed by the fighters that either protected or threatened them two seater reconnaissance aircraft performed the oldest and most strategically vital aerial task of World War 1 a task that required them to return with the intelligence they gathered at all costs Bomber sorties were equally important and dangerous and the very nature of both types of mission required going in harm s way A remarkable number of British French and German two seater teams managed to attain or exceed the five victories needed to achieve the acedom popularly associated with their single seat nemeses and in this book with rich illustrations and first hand accounts of the veterans themselves they receive their long overdue recognition Many high scoring single seat fighter aces also began their careers in two seaters particularly in the early stages of the conflict and their exploits as either pilots or observers are detailed here too

From early aerial experimenters who devoted their lives to the development of a heavier than air flying machine to the

massive expansion of military flight training during the Second World War the story of aviation in Alabama represents a remarkable historical legacy In March 1910 Orville and Wilbur Wright established the nation s first civilian flying school on the grounds of what would become Maxwell Air Force Base the center for military aerospace education and airpower doctrine The establishment of the Wright brothers flying school represents the first of a series of extraordinary events that propelled Alabama to the forefront of the evolution of aviation as the foundation of Pres Franklin Roosevelt s arsenal of democracy during the Second World War "Rich Nation, Strong Army" Richard J. Samuels,2018-08-06 Since World War II Japan has become not only a model producer of high tech consumer goods but also despite minimal spending on defense a leader in innovative technology with both military and civilian uses In the United States nearly one in every three scientists and engineers was engaged in defense related research and development at the end of the Cold War but the relative strength of the American economy has declined in recent years What is the relationship between what has happened in the two countries And where did Japan s technological excellence come from In an economic history that will arouse controversy on both sides of the Pacific Richard J Samuels finds a key to Japan s success in an ideology of technological development that advances national interests From 1868 until 1945 the Japanese economy was fired by the development of technology to enhance national security the rallying cry Rich Nation Strong Army accompanied the expanded military spending and aggressive foreign policy that led to the disasters of the War in the Pacific Postwar economic planners reversed the assumptions that had driven Japan s industrialization Samuels shows promoting instead the development of commercial technology and infrastructure By valuing process improvements as much as product innovation the modern Japanese system has built up the national capacity to innovate while ensuring that technological advances have been diffused broadly through industries such as aerospace that have both civilian and military applications Struggling with the uncertainties of a post Cold War economy the United States has important lessons to learn from the way Japan has subordinated defense production yet emerged as one of the most technologically sophisticated nations in the world The Japanese like the Venetians and the Dutch before them show us that butter is just as likely as guns to make a nation strong but that nations cannot hope to be strong without an ideology of technological development that nourishes the entire national economy
