## **Salt Weathering Hazards:**

Salt Weathering Hazards Andrew S. Goudie, Heather A. Viles, 1997-10-07 The hazards posed to engineering structures by salt weathering are increasing because of such diverse factors as the spread of irrigation and high levels of atmospheric pollution Salt weathering is also a potent cause of rock decay and geomorphological change in polar coastal and desert environments The book discusses the reasons why the hazards are increasing and presents striking case studies from many parts of the world It also discusses the nature and sources of different salts the mechanisms that cause the deterioration of building materials and natural rock outcrops the geomorphological processes of salt attack and their impact on landform development and the strategies and techniques that are available to combat salt attack The book is extensively illustrated and has a very comprehensive bibliography of the multi disciplinary literature *Geomorphological Hazards and Disaster Prevention* Irasema Alcántara, Andrew S. Goudie, 2010-03-04 A state of the art assessment of how geomorphology contributes to the comprehension mapping and modelling of hazardous Earth surface processes *Natural Stone, Weathering Phenomena, Conservation Strategies and Case Studies* S. Siegesmund (ed.), Thomas Norbert Weiss, A. Vollbrecht (ed.), 2002

**Geomorphological Hazards in High Mountain Areas** J. Kalvoda, C.L. Rosenfeld, 2012-12-06 On the basis of a total of thirteen case examples from the Tien Shan Karakorum Himalaya and Tangula Shan central Tibet the risk potential and hazards are inferred from the development of landscape during the Quaternary The history of glaciers can be seen as of central importance for this The Ice Age glacial erosion created V shaped valleys which with their steep flanks as a consequence of the interglacial formation of V valleys have prepared and brought about landslides as well as rockslides and the hazards combined with them The same is true for the moraines which the glaciers have deposited high up in the valley flanks and related loose stone deposits Dry and wet mass movements follow after heavy precipitation especially in the semi arid investigation areas and are catastrophes for the settlements and the communication routes in the valley floors Their key forms are debris cones and debris slopes as well as mudflows and alluvial fans In addition to the Ice Age glaciation history as a preparatory indirect factor the Holocene to present glaciation history is as a result of the damming up of glacier and moraine lakes and their outbursts a direct risk factor The examples presented of acute and already occurred cases of damage were investigated in the years 1989 1994 Acknowledgements The authors wish to thank the Deutsche Forschungsgemeinschaft DFG the Max Planck Gesellschaft MPG the Volkswagen Stiftung VW and the Deutscher Akademischer Austauschdienst DAAD for the financial support for the field work Climatic Geomorphology M. Gutierrez Elorza, 2005-12-29 During the past few decades climatic geomorphology has been substantially enlarged in knowledge thanks to numerous detailed investigations the application of a large number of techniques and the acquisition of abundant absolute dates The challenge of predicting the effects of the prophesied future global warming on morphogenetic processes and landforms has encouraged geomorphologists to study the Late Pleistocene and Holocene climatic changes from the

geomorphological and geological record The advances achieved in the field of climatic geomorphology during the past years are reflected by the publication of several specific monographs about the different morphoclimatic zones The aim of this book is to provide an up to date general view of this branch of geomorphology It includes a chapter on applied geomorphology for each morphoclimatic zone providing an approximation of the main environmental problems Geoscientists geomorphologists

**Arid and Semi-Arid Geomorphology** Andrew S. Goudie,2013-05-27 Based on four decades of research by Professor Andrew Goudie this volume provides a state of the art synthesis of our understanding of desert geomorphology It presents a truly international perspective with examples from all over the world Extensively referenced and illustrated it covers such topics as the importance of past climatic changes the variability of different desert environments rock breakdown wind erosion and dust storm generation sand dunes fluvial and slope forms and processes the role of the applied geomorphologist in desert development and conservation and the Earth as an analogue for other planetary bodies This book is destined to become the classic volume on arid and semi arid geomorphology for advanced students and researchers in physical geography geomorphology Earth science sedimentology environmental science and archaeology

**Encyclopedia of Geomorphology** Andrew Goudie,2013-04-15 Volume editor is the leading authority in the field Alphabetically organized in two volumes c 700 comprehensively signed cross referenced and indexed entries Detailed bibliographies and suggestions for further reading follow most entries Fully illustrated over 300 plates and line drawings Written by an editorial team of over 270 experts from over thirty countries

**Arid Zone Geomorphology** David S. G. Thomas,2011-03-14 The new edition of Arid Zone Geomorphology aims to encapsulate the advances that have been made in recent years in the investigation and explanation of landforms and geomorphological processes in drylands Building on the success of the previous two editions the Third Edition has been completely revised and updated to reflect the latest developments in the field Whilst this latest edition will remain a comprehensive reference to the subject the book has been restructured to include regional case studies throughout to enhance student understanding and is clearly defined into five distinct sections Firstly the book introduces the reader to Large Scale Controls and Variability in Drylands and then moves on to consider Surface Processes and Characteristics The Work of Water The Work of the Wind The book concludes with a section on Living with Dryland

Geomorphology that includes a chapter on geomorphological hazards and the human impact on these environments Once again recognised world experts in the field have been invited to contribute chapters in order to present a comprehensive and up to date overview of current knowledge about the processes shaping the landscape of deserts and arid regions In order to broaden the appeal of the Third Edition the book has been reduced in extent by 100 pages and the Regional chapters have been omitted in favour of the inclusion of key regional case studies throughout the book The Editor is also considering the inclusion of a supplementary website that could include further images problems and case studies

**Geomorphology** Mateo Gutierrez,2012-12-07 This book provides a detailed coverage of the landforms of Planet Earth and the processes that

shaped them The study of these morphologies some of which formed during past geological periods under environmental conditions very different from those of today makes it possible to reconstruct the evolution of relief and to infer environmental changes that have involved geological media the climate or human activity A major advance of Geomorphology in recent decades is the development of techniques that make it possible to quantify morphogenetic processes and rates at which forms change under different environmental conditions The development of Geochronology or absolute dating methods is helping us correct the limitations of relative dating that have prevailed in Geomorphology for many years The ability to assign numerical ages to both landforms and deposits opens up multiple possibilities for reconstructing the evolution of relief making correlations calculating rates and estimating recurrence periods A theme of major concern facing people today is the possible warming of the planet due to the release of greenhouse gases into the environment Investigations conducted by the scientific community show that this temperature increase is at least partially anthropogenic Given this more than probable cause and effect relationship the most sensible and prudent path is to design and apply mitigation measures to alleviate this heating that can negatively affect both the natural environment and human society The information that Geomorphology can provide on the recent past Historical Geomorphology may be very useful in making predictions on the activity of these potentially dangerous processes in the future and on the possible effects of environmental changes The aim of this book is to provide a general vision of the multiple aspects of Geomorphology and to provide a methodological foundation to approach the study of various branches of geomorphology To this end the book contains a basic bibliography that can be used for future research In addition applied aspects of Geomorphology are covered at the end of each chapter to provide knowledge of the activities of geomorphologists in the professional world

### **Transport and Reactivity of Solutions in Confined**

**Hydrosystems** Lionel Mercury, Niels Tas, Michael Zilberbrand, 2013-11-12 The present work reflects a multi disciplinary effort to address the topic of confined hydrosystems developed with a cross fertilization panel of physics chemists biologists soil and earth scientists Confined hydrosystems include all situations in natural settings wherein the extent of the liquid phase is limited so that the solid liquid and or liquid air interfaces may be critical to the properties of the whole system Primarily this so called residual solution is occluded in pores channels in such a way that decreases its tendency to evaporation and makes it long lasting in arid Earth deserts and hyper arid Mars soils areas The associated physics is available from domains like capillarity adsorption and wetting and surface forces However many processes are still to understand due to the close relationship between local structure and matter properties the subtle interplay between the host and the guest the complex intermingling among static reactivity and migration pathway Expert contributors from Israel Russia Europe and US discuss the behaviour of water and aqueous solutes at different scale from the nanometric range of carbon nanotubes and nanofluidics to the regional scale of aquifers reactive flow in sedimentary basins This scientific scope allowed the group of participants with very different background to tackle the confinement topic at different scales The book

is organized according to four sections that include i flow from nano to mega scale ii ions hydration and transport iii in pores channels cavitation iv crystallization under confinement Most of contributions relates to experimental works at different resolution interpreted through classic thermodynamics and intermolecular forces Simulation techniques are used to explore the atomic scale of interfaces and the migration in the thinnest angstrom wide channels

Siegfried Siegesmund, Rolf Snethlage, 2011-01-25 The weathering of historical buildings and indeed of monuments and sculptures of natural stone is a problem that has been encountered for hundreds of years However a dramatic increase in deterioration in the structure of our built heritage has been observed during the past century To understand the complex interaction that the stone in a building suffers with its near environment the building and the macro environment the local climate and atmospheric conditions requires an interdisciplinary approach and the application of many disciplines Climate change over the next 100 years is likely to have a range of direct and indirect impacts on many natural and physical environments including the built environment The protection of our architectural heritage has both cultural and historical importance as well as substantial economic and ecological value Large sums of money are being spent world wide on measures for the preservation of monuments and historical buildings The past few decades has seen an unprecedented level of research activity in this area the results of which are often difficult to access and are summarized in the new edition of **STONE IN ARCHITECTURE** *The Global Casino: An Introduction to Environmental Issues, Fourth Edition* Nick Middleton, 2013-11-26 The Global Casino is a compelling introduction to environmental issues which links the physical environment to its political social and economic contexts Case studies from around the globe are used to illustrate key environmental issues from global warming and deforestation to natural hazards and soil erosion The book highlights the underlying causes behind environmental problems including human actions and emphasises the potential for solutions In line with contemporary international trends emphasis is placed on the critical concept of sustainable development This new edition has been thoroughly revised and updated with the introduction of new illustrative material and up to the minute case studies on topics such as endangered deep sea species the global uptake of unleaded petrol geothermal energy in Iceland genocide in Rwanda and the Indian Ocean tsunami of 2004 Particularly useful features for students include points for
