Congress. House. Committee on Appropriations. Subcommittee on Rural Development, Agriculture, and Related Agencies,1989 Dubious Gastronomy Robert Ji-Song Ku,2013-12-31 California roll Chinese take out American made kimchi dogmeat monosodium glutamate SPAM all are examples of what Robert Ji Song Ku calls dubious foods Strongly associated with Asian and Asian American gastronomy they are commonly understood as ersatz depraved or simply bad In Dubious Gastronomy Ku contends that these foods share a spiritual fellowship with Asians in the United States in that the Asian presence be it culinary or corporeal is often considered watered down counterfeit or debased manifestations of the real thing The American expression of Asianness is defined as doubly inauthentic as insufficiently Asian and unreliably American when measured against a largely ideological if not entirely political standard of authentic Asia and America By exploring the other side of what is prescriptively understood as proper Asian gastronomy Ku suggests that Asian cultural expressions occurring in places such as Los Angeles Honolulu New York City and even Baton Rouge are no less critical to understanding the meaning of Asian food and by extension Asian people than culinary expressions that took place in Tokyo Seoul and Shanghai centuries ago In critically considering the impure and hybridized with serious and often whimsical intent Dubious Gastronomy argues that while the notion of cultural authenticity is troubled troubling and troublesome the apocryphal is not necessarily a bad thing The dubious can be and is often quite delicious Dubious Gastronomy overlaps a number of disciplines including American and Asian American studies Asian diasporic studies literary and cultural studies and the burgeoning field of food studies More importantly however the book fulfills the critical task of amalgamating these areas and putting them in conversation with one another Written in an engaging and fluid style it promises to appeal a wide audience of readers who seriously enjoys eating and reading and thinking about food

Joint FAO-IOC-IAEA technical guidance for the implementation of early warning systems for harmful algal blooms Food and Agriculture Organization of the United Nations,United Nations Educational, Scientific and Cultural Organization-IOC,International Atomic Energy Agency,2023-03-16 Globally there are 3 400 to 4 000 described species of marine microalgae but only 1 to 2 percent are considered to be harmful Harmful algal blooms HABs have significant impacts on food safety and security through contamination or mass mortalities of aquatic organisms The impacts and mass mortalities of marine species caused by

harmful algae are not new and have been recorded for decades. However, there is growing concern that these events will increase due to accelerating global warming, climate change, and anthropogenic activities. Indeed, if not properly controlled, aquatic products contaminated with HAB biotoxins are responsible for potentially deadly foodborne diseases, and when rapidly growing HAB consequences include reduced dissolved oxygen in the ocean, dead zones, and mass mortalities of aquatic organisms. Improving HAB forecasting is an opportunity to develop early warning systems for HAB events such as food contamination, mass mortalities, or foodborne diseases. Surveillance systems have been developed to monitor HABs in many countries; however, the lead time or the type of data, i.e., identification at the species level, determination of toxicity, may not be sufficient to take effective action for food safety management measures or other reasons such as transfer of aquaculture products to other areas. Having early warning systems could help mitigate the impact of HABs and reduce the occurrence of HAB events. The Joint FAO/IOC/IAEA technical guidance for the implementation of early warning systems (EWS) for HABs will guide competent authorities and relevant institutions involved in consumer protection or environmental monitoring to implement early warning systems for HABs present in their areas: marine and brackish waters, specifically those affecting food safety or food security: benthic HABs, fish-killing HABs, pelagic toxic HABs, and cyanobacteria HABs. The guidance provides a roadmap for stakeholders on how to improve or implement an EWS for HABs and biotoxins where appropriate. It is important to note that not all countries and institutions can implement the same level of EWS for HABs, and this guidance is intended mainly for those who seek to broaden existing early warning systems or who are just beginning to consider putting a system in place.
