Feature Interactions in Telecommunications and Software Systems VI Muffy Calder,Evan Magill,2000 Typically telecommunications services are implemented in software Feature interaction is the term used to describe interference between services or features most attention is given to cases where the interference is undesirable ie there is an incompatibility In telecommunications control and data is distributed and on such a large scale that software development is by numerous disjoint teams by its nature therefore this software experienced the feature interaction problem first But while the workshop focuses on communications services the subject has relevance to any domain where separate software entities control a shared resource

Seamless and Secure Communications over Heterogeneous Wireless Networks Jiannong Cao,Chisheng Zhang,2014-01-30 This brief provides an overview of the requirements challenges design issues and major techniques for seamless and secure communications over heterogeneous wireless networks It summarizes and provides detailed insights into the latest research on handoff management mobility management fast authentication and security management to support seamless and secure roaming for mobile clients The reader will also learn about the challenges in developing relevant technologies and providing ubiquitous Internet access over heterogeneous wireless networks The authors have extensive experience in implementing such technologies over heterogeneous wireless networks thus enabling them to bridge the gap between the theoretical results of research and the real practice Combining

basic theoretical concepts and practical implementation this brief is ideal for professionals and researchers in the field. Advanced level students interested in computer communication networks and wireless technologies will also find the content helpful.

Smart Spaces and Next Generation Wired/Wireless Networking Sergey Balandin, Roman Dunaytsev, Yevgeni Koucheryavy, 2010-08-05. We welcome you to the joint proceedings of the anniversary 10 NEW2AN 2010 Next Generation Teletra c and Wired Wireless Advanced Networking and Third ruSMART 2010 Are You Smart conferences held in St Petersburg, Russia during August 23-25, 2010. Originally the NEW2AN conference was launched by ITC International Teletra c Congress in St Petersburg in June 1993 as an ITC Sponsored Regional International Teletra c Seminar. The first implementation was entitled Tra c Management and Routing in SDH Networks and was hosted by R D LONIIS. In 2002 the event received its current name NEW2AN. In 2008 NEW2AN was joined by a new counterpart in smart spaces ruSMART hence boosting interaction between researchers, practitioners and engineers from different areas of ICT. This year in its 10th implementation NEW2AN ruSMART is an established conference with a unique cross disciplinary mix of telecommunications science in Russia. NEW2AN ruSMART has always featured outstanding keynotes from universities and companies from Europe, USA and Russia. The 10th NEW2AN technical program addressed various aspects of next generation network architectures. New and innovative developments for enhanced signaling protocols, QoS mechanisms, cross layer optimization, tra c characterization were also addressed within the program. In particular, issues of QoS in wireless and IP based multiservice networks were dealt with as well as financial aspects of future networks. It is also worth mentioning that emphasis was placed on wireless networks including but not limited to cellular networks, wireless local area networks, personal area networks, mobile ad hoc networks and sensor networks.

Mobile Computing Tomasz Imielinski, Henry F. Korth, 2007-08-26. The rapid development of wireless digital communication technology has created capabilities that software systems are only beginning to exploit. The falling cost of both communication and of mobile computing devices (laptop computers, hand held computers, etc.) is making wireless computing affordable not only to business users but also to consumers. Mobile computing is not a scaled down version of the established and well studied field of distributed computing. The nature of wireless communication media and the mobility of computers combine to create fundamentally new problems.

in networking operating systems and information systems Further more many of the applications envisioned for mobile computing place novel demands on software systems Although mobile computing is still in its infancy some basic concepts have been identified and several seminal experimental systems developed This book includes a set of contributed papers that describe these concepts and systems Other papers describe applications that are currently being deployed and tested The first chapter offers an introduction to the field of mobile computing a survey of technical issues and a summary of the papers that comprise subsequent chapters We have chosen to reprint several key papers that appeared previously in conference proceedings Many of the papers in this book are being published here for the first time Of these new papers some are expanded versions of papers first presented at the NSF sponsored Mobidata Workshop on Mobile and Wireless Information Systems held at Rutgers University on Oct 31 and Nov 1 1994

Heterogeneous Wireless Access Networks Ekram

Hossain,2008-09-18 Heterogeneous wireless networking which is sometimes referred to as the fourth generation 4G wireless is a new frontier in the future wireless communications technology and there has been a growing interest on this topic among researchers and engineers in both academia and industry This book will include a set of research and survey articles featuring the recent advances in theory and applications of heterogeneous wireless networking technology for the next generation e g fourth generation wireless communications systems With the rapid growth in the number of wireless applications services and devices using a single wireless technology such as a second generation 2G and third generation 3G wireless system would not be efficient to deliver high speed data rate and quality of service QoS support to mobile users in a seamless way Fourth generation 4G wireless systems are devised with the vision of heterogeneity in which a mobile user device will be able to connect to multiple wireless networks e g WLAN cellular WMAN simultaneously This book intends to provide a unified view on the state of the art of protocols and architectures for heterogeneous wireless networking The contributed articles will cover both the theoretical concepts and system level implementation issues related to design analysis and optimization of architectures and protocols for heterogeneous wireless access networks
