Online Searching Karen Markey, 2023-02-07 Online Searching prepares students in library and information science programs to assist information seekers at all levels from university faculty to elementary school students Included in the third edition are interviews with librarians and other information professionals whose words of wisdom broaden graduate students perspectives regarding online searching in a variety of work settings serving different kinds of information seekers The book's chapters are organized according to the steps in the search process 1 Conducting a reference interview to determine what the seeker wants 2 Identifying sources that are likely to produce relevant information for the seeker's query 3 Determining whether the user seeks a known item or information about a subject 4 Dividing the query into main ideas and combining them logically 5 Representing the query as input to the search system 6 Conducting the search and responding strategically 7 Displaying retrievals assessing them and responding tactically A new chapter on web search engines builds on students existing experience with keyword searching and relevance ranking by introducing them to more sophisticated techniques to use in the search box and on the results page A completely revised chapter on assessing research impact discusses the widespread use of author and article iMetrics a trend that has developed rapidly since the publication of the second edition More than 100 figures and tables provide readers with visualizations of concepts and examples of real searches and actual results Textboxes offer additional topical details and professional insights New videos supplement the text by delving more deeply into topics such as database types information organization specialized search techniques results filtering and the role of browsing in the information seeking process An updated glossary makes it easy to find definitions of terms used throughout the book With new and updated material this edition of Online Searching gives students knowledge and skills for success when intermediating between information seekers and the sources they need [Database Systems for Advanced Applications '97](#) Rodney Topor, Katsumi Tanaka, 1997 This volume contains the proceedings of the Fifth International Conference on Database Systems for Advanced Applications DASFAA 97 DASFAA 97 focused on advanced database technologies and their applications The 55 papers in this volume cover a wide range of areas in the field of database systems and applications including the rapidly emerging areas of the Internet multimedia and document database systems and should be of great interest to all database system researchers and developers and practitioners **Foraging Theory Applied to Medical Information Searching** Dr Mai Dwairy, 2012-10-24 Workload and other constraints prevent General Practitioners from accessing medical evidence for clinical decisions This problem was studied in New Zealand GPs using Optimal Foraging Theory developed in ecology GPs information search strategies were modelled as sequential steps associated with costs and benefits measured from logbooks of actual searches By consulting the most profitable sources switching sources when unsuccessful and double checking GPs seem close to an optimal trade off between maximizing search success and information reliability and minimizing searching time Subsidised training in information searching and provision of a

literature search service are two inferred avenues to access medical evidence

Virtual Machines Jim Smith, Ravi Nair, 2005-07-12 Virtual Machine technology applies the concept of virtualization to an entire machine circumventing real machine compatibility constraints and hardware resource constraints to enable a higher degree of software portability and flexibility Virtual machines are rapidly becoming an essential element in computer system design They provide system security flexibility cross platform compatibility reliability and resource efficiency Designed to solve problems in combining and using major computer system components virtual machine technologies play a key role in many disciplines including operating systems programming languages and computer architecture For example at the process level virtualizing technologies support dynamic program translation and platform independent network computing At the system level they support multiple operating system environments on the same hardware platform and in servers Historically individual virtual machine techniques have been developed within the specific disciplines that employ them in some cases they aren't even referred to as virtual machines making it difficult to see their common underlying relationships in a cohesive way In this text Smith and Nair take a new approach by examining virtual machines as a unified discipline Pulling together cross cutting technologies allows virtual machine implementations to be studied and engineered in a well structured manner Topics include instruction set emulation dynamic program translation and optimization high level virtual machines including Java and CLI and system virtual machines for both single user systems and servers Examines virtual machine technologies across the disciplines that use them operating systems programming languages and computer architecture defining a new and unified discipline Reviewed by principle researchers at Microsoft HP and by other industry research groups Written by two authors who combine several decades of expertise in computer system research and development both in academia and industry
