Searching for Science Policy (Clt) Jonathan B. Imber, 2002-01-01 The findings of scientific research often provide an important baseline to the formation of public policy However effective communication to the larger public about what scientists do and know is a problem inherent to all democratic societies It is the prerogative of democratic societies to determine what kind of scientific research will be funded Searching for Science Policy offers innovative ways of thinking about how the rhetoric and practice of science operates in various institutional contexts The book is divided into two parts Part 1 Policy Uses and Misuses of Science explores the various ways in which scientific claims are inevitably mediated by how they are used Joel Best draws on statistics involving missing children violence against women and attendance figures at political demonstrations to demonstrate how the motivations to use inaccurate and misleading numbers stems directly from the ideological and organizational interests of those using them Judith Kleinfeld analyzes recruitment policies for women scientists at MIT showing how hiring practices that may be justifiable on extra scientific factors are carried out based on pseudo scientific studies not subject to public scrutiny Robert MacCoun addresses the journalistic misuse of drug and drug abuse statistics and shows how this profoundly distorts policy implications drawn from them And Allan Mazur examines the role scientific evidence has come to play in the law pointing out the pitfalls of its intrinsic quality and how such evidence may be interpreted or misinterpreted by judges and juries Part 2 Searching for Science Policy extends discussion of the role of science to specific ideas about how public policy making might be improved in matters of law family environment drug use and health Mark Kleiman weighs the sometimes conflicting claims of science and social order in formulating drug policy Norval Glenn calls for closer cooperation between professional associations the media and researchers in reporting provisional social science findings to the public Stanley Rothman and S Robert Lichter examine the dynamic by which environmental organizations shape public perceptions of risk and harm And in the concluding chapter Sheila Jasanoff looks closely at differences between the provisional nature of science as normally practiced and the more contentious sphere of litigation that demands ultimate resolution In a time when scientists find themselves subject to more public scrutiny than ever before the well informed citizen is no longer a moral ideal but rather a social imperative Searching for Science Policy helps to clarify the grounds and the circumstances of more effective use of science in public discourse Jonathan B Imber is editor in chief of Society and Class of 1949 Professor in Ethics and professor of sociology at Wellesley College Health and Social Service Journal ,1973 **Handbook of Research on Global Institutional Roles for Inclusive Development**

**The Politics of Attention** Bryan D. Jones, Frank R. Baumgartner, 2005-10-26 On any given day policymakers are required to address a multitude of problems and make decisions about a variety of issues from the economy and education to health care and defense This has been true for years but until now no studies have been conducted on how politicians manage the flood of information from a wide range of sources How do they interpret and respond to such inundation Which issues do they pay attention to and why Bryan D Jones and Frank R Baumgartner answer these questions on decision making processes and prioritization in *The Politics of Attention* Analyzing fifty years of data Jones and Baumgartner's book is the first study of American politics based on a new information

processing perspective The authors bring together the allocation of attention and the operation of governing institutions into a single model that traces public policies public and media attention to them and governmental decisions across multiple institutions The Politics of Attention offers a groundbreaking approach to American politics based on the responses of policymakers to the flow of information It asks how the system solves or fails to solve problems rather than looking to how individual preferences are realized through political action      **Government Research Directory** ,2004
