*The Book of Shells* M.G. Harasewych, Fabio Moretzsohn, 2024-05-31 Who among us hasn't marveled at the diversity and beauty of shells Or picked one up held it to our ear and then gazed in wonder at its shape and hue Many a lifelong shell collector has cut teeth and toes on the beaches of the Jersey Shore the Outer Banks or the coasts of Sanibel Island Some have even dived to the depths of the ocean But most of us are not familiar with the biological origin of shells their role in explaining evolutionary history and the incredible variety of forms in which they come Shells are the external skeletons of mollusks an ancient and diverse phylum of invertebrates that are in the earliest fossil record of multicellular life over 500 million years ago There are over 100 000 kinds of recorded mollusks and some estimate that there are over a million more that have yet to be discovered Some breathe air others live in fresh water but most live in the ocean They range in size from a grain of sand to a beach ball and in weight from a few grams to several hundred pounds And in this lavishly illustrated volume they finally get their full due The Book of Shells offers a visually stunning and scientifically engaging guide to six hundred of the most intriguing mollusk shells each chosen to convey the range of shapes and sizes that occur across a range of species Each shell is reproduced here at its actual size in full color and is accompanied by an explanation of the shell's range distribution abundance habitat and operculum the piece that protects the mollusk when it's in the shell Brief scientific and historical accounts of each shell and related species include fun-filled facts and anecdotes that broaden its portrait The Matchless Cone for instance or *Conus cedonulli* was one of the rarest shells collected during the eighteenth century So much so in fact that a specimen in 1796 was sold for more than six times as much as a painting by Vermeer at the same auction But since the advent of scuba diving this shell has become far more accessible to collectors though not without certain risks Some species of *Conus* produce venom that has caused more than thirty known human deaths The Zebra Nerite the Heart Cockle the Indian Babylon the Junonia the Atlantic Thorny Oyster shells from habitats spanning the poles and the tropics from the highest mountains to the ocean's deepest recesses are all on display in this definitive work

**On the Structure and Distribution of Coral Reefs** Charles Darwin, 1890 *Coral Reefs* Charles Darwin, 1910 New Zealand Journal of Geology and Geophysics, 1971-02 Marine Decapod Crustacea of Southern Australia Gary CB Poore, 2004-08-13 This book is a comprehensive guide to the identification of 800 species of decapod and stomatopod crustaceans from southern Australian marine waters It is liberally illustrated with more than 1000 line drawings giving good views of many species as well as diagnostic illustrations Details for each species include the authority year of description sometimes a common name diagnosis size geographical distribution and ecological and depth distribution The chapter on the Stomatopoda is by Shane Ah Yong Sections within each chapter are hierarchical species within genera within families often with subfamilies as well

Identification is achieved through the use of dichotomous keys adapted from many originally published in the primary literature or developed from scratch Some keys are to all Australian taxa but most are to southern Australian taxa only The information in this book derives from over 200 years of collecting in southern Australian environments from the intertidal to the deep sea and publications in numerous journals in several languages More than 800 of these papers and books are cited Winner of the 2005 Whitley Award for Systematics      **Annual Reports** Academy of Natural Sciences of Philadelphia,1921
