Block Lewis, 2012-12-06 Freud's discovery of an emotional basis for mental illness led him to pursue the emotional basis of human behavior in general. This pursuit led him to undertake observational studies of dreams 1900, everyday mistakes 1901, sexuality 1905b, character formation 1908, 1931 jokes 1905a, and the origin of guilt 1913. Volume 2 of Freud and Modern Psychology examines the texts of each of these major writings in general psychology, continuing to explore the contradiction between Freud's observations about the power of emotions and his narrow theoretical formulations about human behavior. Volume 2 also reviews the remarkable power of the uniquely moral emotions of shame and guilt not only to create psychiatric symptoms as discussed in Volume 1 but to infiltrate our nightly dreams, create everyday parapraxes, influence the development of sexuality, specify the emotional release in jokes, shape personality and create human culture. As we saw in Volume 1, we shall see again in Volume 2 that Freud's theoretical difficulties arose from the absence of a viable theory of human nature as cultural that is social by biological origin. In a theoretical framework based on the cultural nature of human nature, the emotions and the social cohesion are reciprocally related to each other. The emotions are the means of the social cohesion which in turn is the means by which the emotions including shame and guilt are formed in infancy.

Neotropical Birds of Prey David F. Whitacre, 2013-03-01 Until recently, surprisingly little has been known about the biology and behavior of tropical forest raptors, including such basic aspects as diets, breeding biology, habitat requirements, and population ecology, information critical to the development of conservation efforts. The Peregrine Fund conducted a significant eight-year-long research program on the raptor species including owls in Tikal National Park in Guatemala to learn more about Neotropical birds of prey. Impressive and unprecedented in scale, this pioneering research also involved the development of new methods for detecting, enumerating, and studying these magnificent but often elusive birds in their forest home. Beautifully illustrated with photographs of previously little-known species, the resulting book is the most important single source for information on the lowland tropical forest raptor species found in Central America. Neotropical Birds of Prey covers twenty specific species in depth, including the Ornate Hawk Eagle, the Barred Forest Falcon, the Bat Falcon, and the Mexican Wood Owl, offering thorough synopses of all current knowledge regarding breeding biology and behavior, diet, habitat use, and spatial needs. Contributors to this landmark work also show how the populations fit together as a community with overlapping habitat and prey needs that can put them in competition with reptiles and mammalian carnivores, as well yet differ from one another in their nesting or feeding behaviors and population dynamics. The work's substantive original data offer interesting comparisons between tropical and temperate zone species and provide a basis for establishing conservation measures based on firsthand research. Making available for the first time new data on the biology, ecology, behavior, and conservation of the majestic owls and raptors of the New World tropics, this book will appeal to a wide ornithological readership, especially the many raptor enthusiasts around the world.
