Seasonal Patterns Of Stress Immune Function And Disease:

Seasonal Patterns of Stress, Immune Function, and Disease Randy J. Nelson, Gregory E. Demas, Sabra L. Klein, Lance J. Kriegsfeld, 2002-03-25 This book presents evidence that infection is cyclical with the seasons and that this phenomenon is mirrored in cycles of immune function The book identifies the mechanisms by which immune systems are bolstered to counteract seasonally recurrent stressors such as extreme temperature reductions and food shortages Stress infectious diseases autoimmune diseases and human cancers are examined and the role of hormones such as melatonin and glucocorticoids is considered The book begins with an overview of seasonality biological rhythms and photoperiodism and basic immunology and then discusses seasonal fluctuations in disease prevalence immune function and energetics and endocrinology as they relate to immune function The clinical significance of this issue is also addressed as such seasonal changes may play an important role in the development and treatment of infections This first monograph to examine seasonal immune function from an interdisciplinary perspective will serve practitioners as well as advanced undergraduates and graduate students in biology immunology human and veterinary medicine neuroscience endocrinology and zoology

Seasonal Patterns of Stress, Immune Function, and Disease Randy J. Nelson, Gregory E. Demas, Sabra L. Klein, Lance J. Kriegsfeld, 2002-03-25 This volume presents evidence that infection is cyclical with the seasons and that this phenomenon is mirrored in cycles of immune function The authors identify the mechanisms by which immune systems are bolstered to counteract seasonally recurrent stressors such as extreme temperature reductions and food shortages Stress infectious diseases autoimmune diseases and human cancers are examined and the role of hormones such as melatonin and glucocorticoids are considered This is the first monograph to examine seasonal immune function from an interdisciplinary perspective

Ecoimmunology Gregory Demas, Randy Nelson, 2012-01-05 This book critically reviews recent advances in ecoimmunology a newly emergent interdisciplinary research field that examines interactions among host physiology and disease ecology in a wide range of environmentally relevant contexts

Tempests, Poxes, Predators, and People L. Michael Romero, John C. Wingfield, 2016 Most physiological and behavioral mechanisms that comprise the stress response come from laboratory experiments using domesticated animals This book summarizes work to understand stress in natural contexts It places modern stress research into an evolutionary context and provides predictions on how wild animals might cope with human altered habitats

Avian Immunology Bernd Kaspers, Karel A. Schat, 2012-12-02 The second edition of Avian Immunology provides an up to date overview of the current knowledge of avian immunology From the ontogeny of the avian immune system to practical application in vaccinology the book encompasses all aspects of innate and adaptive immunity in chickens In addition chapters are devoted to the immunology of other commercially important species such as turkeys and ducks and to ecoimmunology summarizing the knowledge of immune responses in free living birds often in relation to reproductive success The book contains a detailed description of the avian innate immune system encompassing

the mucosal enteric respiratory and reproductive systems The diseases and disorders it covers include immunodepressive diseases and immune evasion autoimmune diseases and tumors of the immune system Practical aspects of vaccination are examined as well Extensive appendices summarize resources for scientists including cell lines inbred chicken lines cytokines chemokines and monoclonal antibodies The world wide importance of poultry protein for the human diet as well as the threat of avian influenza pandemics like H5N1 and heavy reliance on vaccination to protect commercial flocks makes this book a vital resource This book provides crucial information not only for poultry health professionals and avian biologists but also for comparative and veterinary immunologists graduate students and veterinary students with an interest in avian immunology With contributions from 33 of the foremost international experts in the field this book provides the most up to date review of avian immunology so far Contains a detailed description of the avian innate immune system reviewing constitutive barriers chemical and cellular responses it includes a comprehensive review of avian Toll like receptors Contains a wide ranging review of the ecoimmunology of free living avian species as applied to studies of population dynamics and reviews methods and resources available for carrying out such research

Medical Geology of Africa Theophilus Clavell Davies, 2024-06-14
Medical Geology of Africa explores the connection between geological materials processes and the health of humans and animals The book fosters an improved understanding of the ways in which the geological environment impacts the geographical distribution of health problems and how they contribute to better diagnoses and therapy Africa s unique geoenvironmental condition gives added relevance to such studies underlining the need for geoscience and public health students and practitioners to understand new principles and applications Chapters in the book provide extended enquiry based investigations and examples that employ real geochemical datasets epidemiological records public health statistics and visualizations Provides a summary of current research on Medical Geology of Africa Identifies gaps in knowledge of the role of the geo environment in deciphering unknown aetiologies Assembles the most recent literature on current thematic issues and prescribes directions of future research

Stress: Neuroendocrinology and Neurobiology George Fink, 2016-12-15
Stress Neuroendocrinology and Neurobiology Handbook of Stress Series Volume 2 focuses on neuroendocrinology the discipline that deals with the way that the brain controls hormonal secretion and in turn the way that hormones control the brain There have been significant advances in our understanding of neuroendocrine molecular and epigenetic mechanisms especially in the way in which stress induced hormonal and neurochemical changes affect brain plasticity neuronal connectivity and synaptic function The book features the topic of epigenetics and how it enables stress and other external factors to affect genetic transmission and expression without changes in DNA sequence Integrated closely with new behavioral findings and relevance to human disorders the concepts and data in this volume offer the reader cutting edge information on the neuroendocrinology of stress Volume 2 is of prime interest to neuroscientists clinicians researchers academics and graduate students in neuroendocrinology neuroscience biomedicine endocrinology psychology psychiatry and

in some areas of the social sciences including stress and its management in the workplace Includes chapters that offer impressive scope with topics addressing the neuroendocrinology and endocrinology of stress Presents articles carefully selected by eminent stress researchers and prepared by contributors that represent outstanding scholarship in the field Richly illustrated with explanatory figures and tables

Mechanisms of Circadian Systems in Animals and Their Clinical Relevance Raúl Aguilar-Roblero, Mauricio Díaz-Muñoz, Mária Luisa Fanjul-Moles, 2014-10-31 Well known experts in the field of Chronobiology from around the world provide an integrative view of the state of the art of circadian biology At present genetic and epigenetic interaction of regulatory pathways among circadian oscillators metabolic networks cellular differentiation and neuronal communication are subject of intense scrutiny The book is organized in three sections The first includes selected examples of the circadian systems of crustaceans insects fish birds and mammals The second is a detailed view of the physiological mechanisms underlying the circadian clocks in mammals Finally in the third section some examples of the relevance of circadian biology and circadian misalignment to health and disease are provided including nutrition and metabolism obesity cancer cardiovascular and pulmonary diseases Huntington and affective diseases This section concludes with a brief review on gene therapy and its potential use as a therapeutic tool to correct clock genes pathologies This book is aimed at all those interested in contemporary aspects of physiology biochemistry and molecular biology applied to the study and characterization of timing systems It could be used as an initial approach to this field but it also provides updated information for those already familiar with the fascinating field of Chronobiology

Energy and protein metabolism and nutrition in sustainable animal production James W. Oltjen, E. Kebreab, Hélène Lapierre, 2013-11-04 As world population increases demand for food and particularly animal products is expected to grow substantially Because of limited area for expansion of animal agriculture and growing consumer concern for the environmental impact of animal production gains in animal efficiency will have to be part of the solution This book addresses key issues of how energy and protein are utilized and interact in farm animals from the molecular to the whole animal and even to the herd or group level of organization It contains state of the art research and reviews on several topics of nutrient utilization and metabolism from top scientists worldwide Key issues addressed include energy protein interactions methodology such as in vitro and in vivo techniques regulation including pre natal programming and endocrine regulation modeling and systems biology including a tribute to the late Professor R Lee Baldwin of the University of California Davis a leader in the field products and health of animals tissue metabolism and environmental sustainability in agriculture This book is a valuable resource for researchers students policy makers producers and industry professionals believing that a better understanding of metabolism and nutrition of farm animals is part of the solution

Photoperiodism Randy J. Nelson, David L. Denlinger, David E. Somers, 2010-01-27 Life evolves in a cyclic environment and to be successful organisms must adapt not only to their spatial habitat but also to their temporal habitat How do plants and animals determine the time of year so they can anticipate seasonal changes in their

habitats In most cases day length or photoperiod acts as the principal external cue for determining seasonal activity For organisms not living at the bottom of the ocean or deep in a cave day follows night and the length of the day changes predictably throughout the year These changes in photoperiod provide the most accurate signal for predicting upcoming seasonal conditions Measuring day length allows plants and animals to anticipate and adapt to seasonal changes in their environments in order to optimally time key developmental events including seasonal growth and flowering of plants annual bouts of reproduction dormancy and migration in insects and the collapse and regrowth of the reproductive system that drives breeding seasons in mammals and birds Although research on photoperiodic time measurement originally integrated work on plants and animals recent work has focused more narrowly and separately on plants invertebrates or vertebrates As the fields have become more specialized there has been less interaction across the broader field of photoperiodism As a result researchers in each area often needlessly repeat both theoretical and experimental work For example understanding that there are genetically distinct morphs among species that depending on latitude respond to different critical photoperiods was discovered separately in plants invertebrates and vertebrates over the course of 20 years However over the past decade intense work on daily and seasonal rhythms in fruit flies mustard plants and hamsters and mice has led to remarkable progress in understanding the phenomenology as well as the molecular and genetic mechanisms underlying circadian rhythms and clocks This book was developed to further this type of cooperation among scientists from all related disciplines It brings together leading researchers working on photoperiodic timing of seasonal adaptations in plants invertebrates and vertebrates Each of its three sections begins with an introduction by the section editor and at the end of the book the section editors present a synthesis of common themes in photoperiodism as well as discuss similarities and differences in approaches to the study of photoperiodism and future directions for research on photoperiodic time measurement **Breaking**

Micromammals and Macroparasites S. Morand, B.R. Krasnov, R. Poulin, 2007-01-27 Small mammals are among the most ubiquitous and important components of terrestrial ecosystems They have coevolved and now coexist with a diverse array of parasites such that not only are all aspects of their biology influenced by parasitism but they also play key roles in the transmission and maintenance of parasitic diseases This book provides a comprehensive survey of the diversity and biology of metazoan parasites affecting small mammals of their impact on host individuals and populations and of the management implications of these parasites for conservation biology and human welfare Designed for a broad multidisciplinary audience it will be an essential resource for researchers students and practitioners alike in the fields of

parasitology evolutionary ecology wildlife management and conservation biology Manic-Depressive Illness Frederick K. Goodwin, Kay Redfield Jamison, 2007-03-22 This long awaited second edition of Manic Depressive Illness will exhaustively review the biological and genetic literature that has dominated the field in recent years and incorporate cutting edge research conducted since publication of the first edition Drs Frederick Goodwin and Kay Redfield Jamison have updated their surveys of psychological and epidemiological evidence as well as that pertaining to diagnostic issues course and outcome and they offer practical guidelines for differential diagnosis and clinical management This book will be a valuable addition to the libraries of psychiatrists and other physicians psychologists clinical social workers neuroscientists pharmacologists and the patients and families who live with manic depressive illness Infectious Diseases in Primates Charles Nunn, Sonia M. Altizer, 2006-04-27 This title includes the following features The first book to synthesise and integrate the previously disparate areas of primate socioecology parasite functional categories host defences and theoretical models of disease spread Organizes hypotheses according to parasite traits such as transmission mode host specificity and virulence Develops a new co evolutionary framework for investigating parasites and primate social evolution at empirical and theoretical scales Ideal graduate seminar course material *The CRF Signal* Jay Schulkin, 2017 Information molecules such as corticotropin releasing factor CRF are ancient and widely distributed across diverse organs The scientific community is beginning to realize that CRF is a dynamic and diversely widespread peptide hormone e g placenta with many functions parturition metamorphosis circadian rhythmicity beyond acting as a releasing factor in the brain Indeed CRF has been associated with a range of states of the brain including fear and anxiety social contact and incentive salience and addiction Examining the evolutionary origins of CRF its diverse endocrine and neural functions this book provides insights into CRF that will be of interest to students and researchers in the biological medical and behavioral sciences Page 4 of cover **Wild Immunology—The Answers Are Out There** Gregory M. Woods, Andrew S. Flies, 2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non

human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species
