order Nelson Pallmeyer argues that the Gulf War was used to serve a very different purpose United States elites in the national security establishment instead sought to make the world safe for future wars to derail the post Cold War peace dividend and to foreclose the possibility of a world order based on international justice and commitment to human rights From the perspective of the Third World where ever greater debt leads to ever greater death Nelson Pallmeyer shows how the new world order is only a new way of managing the old world order the misery of the poor will continue to sustain the appetites of the rich Parallel to the increased pauperization of the Third World the 1980s saw the massive transfer of wealth within the United States from the poor to the very wealthy The consequences the decay of our cities and dramatic increases in racial violence drug abuse and crime At the same time the impending ecological crisis has escalated rapidly Finally Nelson Pallmeyer turns his attention to the role of Christians in blessing the new world order Appalled by the abuse of religious rhetoric in justification of the Gulf War he examines how Jesus confronted the world order of his day and calls for a radical discipleship that worships the God of life rather than the idols of power and wealth *Brave Laughter* David Loye, 2007-05

**Explorations in Automatic Thesaurus Discovery** Gregory Grefenstette,2012-12-06 Explorations in Automatic Thesaurus Discovery presents an automated method for creating a first draft thesaurus from raw text. It describes natural processing steps of tokenization, surface syntactic analysis, and syntactic attribute extraction. From these attributes, word and term similarity is calculated, and a thesaurus is created showing important common terms and their relation to each other, common verb-noun pairings, common expressions, and word family members. The techniques are tested on twenty different corpora ranging from baseball newsgroups, assassination archives, medical X-ray reports, abstracts on AIDS, to encyclopedia articles on animals, even on the text of the book itself. The corpora range from 40,000 to 6 million characters of text, and results are presented for each in the Appendix. The methods described in the book have undergone extensive evaluation. Their time and space complexity are shown to be modest. The results are shown to converge to a stable state as the corpus grows. The similarities calculated are compared to those produced by psychological testing. A method of evaluation using Artificial Synonyms is tested. Gold Standards evaluation shows that techniques significantly outperform non-linguistic based techniques for the most important words in corpora. Explorations in Automatic Thesaurus Discovery includes applications to the fields of information retrieval, using established testbeds, existing thesaural enrichment, semantic analysis. Also included are applications showing how to create, implement, and test a first draft thesaurus.
