Look Inside Askyscraper:

Building the Skyline Jason M. Barr, 2016 The Manhattan skyline is one of the great wonders of the modern world But how and why did it form Much has been written about the city s architecture and its general history but little work has explored the economic forces that created the skyline This book chronicles the economic history of the Manhattan skyline In the process the book debunks some widely held misconceptions about the city s history Part I lays out the historical and environmental background that established Manhattan s real estate trajectory before the Skyscraper Revolution at the end of the 19th century The book begins with Manhattan s natural and geological history and then moves on to how it influenced early land use and neighborhood formation and how these early decisions eventually impacted the location of skyscrapers Part II focuses specifically on the economic history of skyscrapers and the skyline investigating the reasons for their heights frequencies locations and shapes The book discusses why skyscrapers emerged downtown and why they appeared three miles to the north in midtown but not in between Contrary to popular belief it was not due to the depths of Manhattan s bedrock nor the presence of Grand Central Station Rather midtown s emergence was a response to the economic and demographic forces that were taking place north of 14th Street after the Civil War The book also presents the first rigorous investigation of the causes of the building boom during the Roaring Twenties Contrary to conventional wisdom the boom was largely a rational response to the economic growth of the nation and city The last chapter investigates the value of Manhattan Island and the relationship between skyscrapers and land prices Finally an Epilogue offers policy recommendations for a resilient and robust future skyline **Forum and Column Review** ,1927 FCS Civil & Construction Technology L4 ,2009 **Building Developer** ,1928 Time Briton Hadden, Henry Robinson Luce, 1960

Skyscrapers of the Future Carlo Aiello, 2011-01-01 No other architectural genre captures our imagination and reflects our cultural and technological achievements like these towers that pierce the sky We start off with the history and evolution of building high from the Egyptian pyramids Gothic cathedrals and first American skyscrapers to the contemporary reality in Asia and the Middle East We present two fascinating interviews the first one with Carol Willis the founder and director of the Skyscraper Museum in New York City who explains the true genetics and economics behind the birth and future of the skyscraper The second one with Italian artist Giacomo Costa who shares his vision about the relationship between the natural environment human activity and supernatural reality with provocative images of an apocalyptic urban future Javier Quintana exposes the time gap between new architectural concepts and their built reality like Arne Hisek s City of the Future designed in 1928 and materialized in 1998 by Cesar Pelli as the Petronas Towers in Kuala Lumpur or Sergei Lopatin s 1925 idea for the Veshenka Tower in Moscow later observed as the Willis Tower former Sears Tower in Chicago in 1974 Another group of essays explore the global influence of Manhattan as a contemporary Babylon to be replicated across the world or the role of the Italian Futurists Japanese Metabolists and Archigram who influenced generations of architects and

designers to push forward the concept of vertical living In the Opinion section you will find critiques on some of the latest ideas for skyscraper design by some of the most forward looking architects like the concept of pixilated tectonics in Le Project Triangle in Paris by Herzog while Morphosis Architects explores new programs for vertical density with The Phare Tower Lastly Studio SHIFT masterfully integrates their Miyi Tower in Sichuan China with the existing landscape Central to this book are thirty projects from eVolo s 2009 Skyscraper Competition which look into the future of the skyscraper with the use of new technologies programs and aesthetic expression Sustainability globalization flexibility and adaptability are just some of the multi layered elements explored by some the entries You will find examples of cities in the sky horizontal skyscrapers that link various cities or emergency architecture for disaster zones **American Architect and Building News** ,1904 *Buildings and Building Management* Frank J. Zorn,1913 **How to Inspire Outstanding Ideas** TJ Xia,2017-11-08 Crafting wonderful ideas is the first step on the road toward great achievementsbut how do you come up with them Finding concrete methods for creating awesome ideas has been a daunting long standing questuntil now TJ Xia has turned his expertise and passion for promoting creativity and innovation into a comprehensive book to help anyone generate beneficial new ideas more easily and efficiently The book describes a clear set of universal approaches that will broadly stimulate your creativity directly leading you to discover brilliant new concepts and devise astonishing new solutions These techniques have been condensed from a decades long study analyzing several thousand real life cases that involve inconspicuous yet exceptional ideas Experience has shown that people who use these simple techniques derive substantial benefits almost immediately at work and in their personal lives In these pages youll find over two hundred fascinating examples from the study to assist you in comprehending the basic concepts more effectively A Grand Checklist containing all of the approaches attached to the end of the book as a toolbox shall help any type of brainstorming sessions These highly productive approaches can be used by people from all walks of life to gain a major boost in your ability to think innovativelyno matter who you are or what you want to accomplish **The American Architect and Building News** ,1904
