around us If you were to present the feats of modern science to someone from the past those feats would surely be considered magic Theoretical physicist Felix Flicker proves that they are indeed magic just familiar magic The name for this magic is condensed matter physics Most people haven't heard of the field yet more than a third of physicists identify as condensed matter researchers making it the most active area in the subject with good reason Condensed matter is the solids liquids and gasses that surround us and the more exotic matters which dictate every aspect of our present existence and hold the keys to a brighter future from quantum computing to real life invisibility cloaks Flicker teases out the magical threads that run through our daily lives Condensed matter physics allows you to create anything abiding by the laws of reality and often we find that those laws can be bent Flicker explains how to create new particles that never existed before how to make crystals shoot out of such intense light they can cut through metal how to separate the poles of a magnet and more The book's endearing conceit is that you are an aspiring wizard whose ability to cast spells i.e. to do science is dependent on your grasp of the fundamentals of our universe This book contains no equations or charts instead it's full of owls and mountains and infinite libraries and staffs and wands and martial arts and mythical islands ruled by sage knot makers Part of the book's magic is that for all these fanciful trappings it still feels practical and applicable The *Magick of Physics* will open your eyes to magic that surround us everyday *Investing For Canadians All-in-One For Dummies* Tony Martin, Eric Tyson, 2020-12-03

Narrative Personae and Desire in Modernist Fiction Kevin Ohi, 2025-09-25 Examining modernist fiction in the context of a longer tradition of narrative impersonality Narrative Personae and Desire in Modernist Fiction explores how narrative language renders subjective states of interiority and desire Inspired by linguistic analyses of the speakerless sentences of narrative language and their unoccupied centers of perception Kevin Ohi argues that modernist texts are populated by quasi persons narrative voices that are impersonal while trailing effects of personality and characters whose personhood is suspended the incisive rendering of psychology and desire produced by externalizations of consciousness Certain first person texts highlight the constitutive tension between the functions of narrator and character joined in that first person while in third person texts a charismatic or impervious central voice can be shown nevertheless to hold the psychologies it empties from the characters it describes At stake is the particular way that modernist narrative responds to the question of literature's capacities for addressing psychic life In Virginia Woolf's Jacob's Room William Faulkner's As I Lay Dying Ford Madox Ford's The Good Soldier Eudora Welty's

The Golden Apples Ronald Firbank's Concerning the Eccentricities of Cardinal Pirelli and James Purdy's Mourners Below this volume finds a paradoxical merger a humanizing effect achieved by narrative depersonalization and its evocations of psychology and desire
