Mathematical Discourse that Breaks Barriers and

Creates Space for Marginalized Learners ,2017-01-01 For the past decade reform efforts have placed importance on all students being able to participate in collaborative and productive mathematical discourse as an essential component for their learning of mathematics with deep conceptual understandings In this book our intent is to support mathematics education researchers teacher educators teachers and policy makers in providing positive solutions to the enduring challenge in mathematics education of enabling all participants including diverse students to equitably access mathematical discourse By diverse learners we mean learners who are minoritized in terms of gender disability or and social cultural ethnic racial or language backgrounds We aim to increase understanding about what it means to imagine design and engage with policy and practice which enhance opportunities for all students to participate in productive mathematical discourse In widening the lens across policy and practice settings we recognize the interplay between the many complex factors that influence student participation in mathematics The various chapters tell practical stories of equitable practices for diverse learners within a range of different contexts Different research perspectives empirical traditions and conceptual foci are presented in each chapter Various aspects of diversity are raised issues of concern are engaged with and at times conventional wisdom challenged as the authors provide insights as to how educators may address issues of equitable access of minoritized learners to the mathematical discourse within settings across early primary through to high school and situated in schools or in family and community settings

Calabi-yau Manifolds: A Bestiary For Physicists (2nd Edition) Tristan

Hubsch,2024-12-17 Calabi Yau spaces are complex spaces with a vanishing first Chern class or equivalently with a trivial canonical bundle sheaf so they admit a Ricci flat Kähler metric that satisfies the vacuum Einstein equations Used to construct possibly realistic super string models they are being studied vigorously by physicists and mathematicians alike Calabi Yau spaces have also turned up in computations of probability amplitudes in quantum field theory This book collects and reviews relevant results on several major techniques of 1 constructing such spaces and 2 computing physically relevant quantities such as spectra of massless fields and their Yukawa interactions These are amended by 3 stringy corrections and 4 results about the moduli space and its geometry including a preliminary discussion of the still conjectural universal deformation space It also contains a lexicon of assorted terms and important results and theorems which can be used independently The first edition of Calabi Yau Manifolds A Bestiary for Physicists was the first systematic book covering Calabi Yau spaces related mathematics and their application in physics Thirty years on this new edition explores the intense development in the field since 1992 providing an additional 400 references It also addresses advances in machine learning and other computer aided methods that have recently made physically relevant computations feasible opened new avenues in the field and begun to deliver concretely on the now 40 year old promise of string theory The presentation of ideas results and computational

methods is complemented by detailed models and sample computations throughout This second edition also contains a new closing section outlining the staggering advances of the past three decades and providing suggestions for future reading
