Information Technology And Organisational Change K.D. Eason, 1989-01-19 First published in 1988 Information Technology is a powerful force for organisational change but its implementation can cause major difficulties and is often obstructed as people do not know how to cope with it Written from 18 years of practical experience this book is designed to help managers users and technical specialists appreciate the human and organisational implications of information technology and provide practical guidance on managing these issues which are crucial to the successful exploitation of the technology This is not a book to teach people about information technology rather it is about what to use it for and how to harness its potential

Information Technology and Organizations : Strategies, Networks, and Integration Brian P. Bloomfield, Rod Coombs, David Knights, Dale Littler, 1997-03-27 This book is concerned with the ways in which organizations design build and use information technology systems In particular it looks at the interaction between these IT centred activities and the broader management processes within organizations The authors adopt a critical social science perspective on these issues and are primarily concerned with advancing theoretical debates on how best to understand the related processes of technological and organizational change To this end the book examines and deploys recent work on power knowledge actor network theory and critical organization

theory The result is an account of the nature and significance of information systems in organizations which is an alternative perspective to pragmatic and recipe based approaches to this topic which dominate much contemporary management literature on IT

Mirages of Development Jean Jacques Salomon, André Lebeau, 1993 This work looks at the issues of development in terms that attack both the earlier idealism and the current mood of cynicism about the Third World

Evolutionary Economics: v. 1 Marc R. Systems for Sustainability Frank A. Stowell, Ray L. Ison, Rosalind Armson, Jacky Holloway, Sue Jackson, Steve McRobb, 2013-11-11 The term sustainability has entered the lexicon of many academic disciplines and fields of professional practice but to date does not appear to have been seriously considered within the systems community unless perhaps under other guises Within the wider community there is no consensus around what sustainability means with some authors identifying 70 to 100 definitions of the term Some see sustainability as the precise and quantifiable outcomes of biological systems whilst others see it in terms of processes relevant to personal and organizational change with the potential to effect changes in our relationships with our environments

Internationally it has been increasingly used in relation to the term sustainable development a term popularised by the Brundland Commission's report in 1987 entitled Our Common Future Despite this diversity and polarised perception on its utility unlike many other popular terms it has not had its time and subsided quietly from our language It is therefore timely for the systems community to explore the relationship between systems and sustainability in a range of contexts Participants in this the 5th International Conference of the United Kingdom Systems Society UKSS have been invited to reflect critically on the contribution of systems thinking and action to sustainability to the sustainability of personal relationships the organizations in which live and work and our natural environment

Telematics and Work J.H. Erik Andriesson, Robert A. Roe, 2013-05-24 This volume is part of a publication series emerging from an international interdisciplinary study group on New Technologies and Work NeTWork NeTWork is sponsored by the Werner Reimers Foundation Bad Homburg Germany and the Maison des Sciences de l'Homme Paris The NeTWork study group has set itself the task of intellectually penetrating various problem domains posed by the introduction and spread of new technologies in work settings This problem focus requires interdisciplinary co operation The usual mode of operating is to identify an important problem within the NeTWork scope to attempt to prestructure it and then to invite original contributions from European researchers or research teams actively involved in relevant analytic or developmental work A specific workshop serves to cross fertilize the different approaches and to help to integrate more fully the individual contributions The concept of telematics refers to the integration of computer telecommunication and information technologies It alludes to the opportunities presented by the technical means to communicate and transfer data over large distances by intelligent equipment Teleshopping teleconferencing teleworking and telebanking are but a few examples of a development which influences both public and private environments Both households and workplaces are likely to be thoroughly changed by telematics This publication emphasises the application of telematics in working environments The central questions of the book are How will the present and future development of telematics effect the nature and organization of work and under which conditions will this development be optimal From the various contributions it is clear that telematics is not a single direct cause or determinant of particular changes in work and organization The development and application of telematics depend on decision making of actors at a political scene both outside and inside the work organizations The effects of the use of these applications appear to be co determined by many other factors In fact the technology interacts with political economic and social factors in a complex process that shapes new organizational forms and work relationships IT Strategies for Information Management David Bawden, Karen Blakeman, 1990
