The Oxford Handbook of the History of Physics Jed Z. Buchwald, Robert Fox, 2013-10-10 The Oxford Handbook of the History of Physics brings together cutting edge writing by more than twenty leading authorities on the history of physics from the seventeenth century to the present day By presenting a wide diversity of studies in a single volume it provides authoritative introductions to scholarly contributions that have tended to be dispersed in journals and books not easily accessible to the general reader While the core thread remains the theories and experimental practices of physics the Handbook contains chapters on other dimensions that have their place in any rounded history These include the role of lecturing and textbooks in the communication of knowledge the contribution of instrument makers and instrument making companies in providing for the needs of both research and lecture demonstrations and the growing importance of the many interfaces between academic physics industry and the military

Making Scientific Instruments in the Industrial Revolution A.D. Morrison-Low, 2017-03-02 At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self confidence to exhibit their products in London to an international audience How had this change come about and why This book looks at the four main and two lesser English centres known for instrument production outside the capital Birmingham Liverpool Manchester and Sheffield along with the older population centres in Bristol and York Making wide use of new sources Dr Morrison Low curator of history of science at the National Museums of Scotland charts the growth of these centres and provides a characterisation of their products New information is provided on aspects of the trade especially marketing techniques sources of materials tools and customer relationships From contemporary evidence she argues that the principal output of the provincial trade with some notable exceptions must have been into the London marketplace anonymously and at the cheaper end of the market She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades By virtue of its approach and subject matter the book considers aspects of economic and business history gender and the family the history of science and technology material culture and patterns of migration It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government In bringing together this wide range of interests Dr Morrison Low enables us to appreciate how central the making selling and distribution of scientific instruments was for the Industrial Revolution

Reader's Guide to the History of Science Arne

Hessenbruch,2013-12-16 The Reader's Guide to the History of Science looks at the literature of science in some 550 entries on individuals Einstein institutions and disciplines Mathematics general themes Romantic Science and central concepts Paradigm and Fact The history of science is construed widely to include the history of medicine and technology as is reflected in the range of disciplines from which the international team of 200 contributors are drawn How Scientific Instruments Have Changed Hands ,2016-09-12 This collection of essays discusses the marketing of scientific and medical instruments from the eighteenth century to the First World War The evidence presented here is derived from sources as diverse as contemporary trade literature through newspaper advertisements to rarely surviving inventories and from the instruments themselves The picture may not yet be complete but it has been acknowledged that it is more complex than sketched out twenty five or even fifty years ago Here is a collection of case studies from the United Kingdom the Americas and Europe showing instruments moving from maker to market place and to some extent what happened next Contributors are Alexi Baker Paolo Brenni Laura Ch zaro Gloria Clifton Peggy Aldrich Kidwell Richard L Kremer A D Morrison Low Joshua Nall Sara J Schechner and Liba Taub *British Engineers and Africa, 1875-1914* Casper Andersen,2015-10-06 Using a wide range of primary sources that include correspondence diaries technical reports institutional minutes and periodicals Andersen reconstructs the networks and activities of Britain's engineers while focusing on London as a centre of imperial expansion **A History of Light and Colour Measurement** Sean F. historical research In this series of books we propose to show by example how artifacts can be employed in the study of the history of science and technology in ways ranging from motivating a line of research to providing hard evidence in the solution of an otherwise insoluble problem The first volume focused on medicine in this the second volume the topic our authors address is electronics As readers will discover there is considerable scope in the range of topics and in the range of uses of artifacts There is also a section that suggests to readers what kind of questions they might consider when they visit electrical exhibits and where those exhibits are to be found This series is sponsored by the Deutsches Museum in Munich the Science Museum in London and the Smithsonian Institution in Washington with help from professional historians in other museums and elsewhere

Arms, Economics and British Strategy G. C. Peden, 2007-02-08 This book integrates strategy technology and economics and presents a new way of looking at twentieth century military history and Britain's decline as a great power G C Peden explores how from the Edwardian era to the 1960s warfare was transformed by a series of innovations including dreadnoughts submarines aircraft tanks radar nuclear weapons and guided missiles He shows that the cost of these new weapons tended to rise more quickly than national income and argues that strategy had to be adapted to take account of both the increased potency of new weapons and the economy's diminishing ability to sustain armed forces of a given size Prior to the development of nuclear weapons British strategy was based on an ability to wear down an enemy through blockade attrition in the First World War and strategic bombing in the Second and therefore power rested as much on economic strength as on armaments

International Bibliography of Business History Francis Goodall, Terry Gourvish, Steven Tolliday, 2013-12-16 The field of business history has changed and grown dramatically over the last few years There is less interest in the traditional company centred approach and more concern about the wider business context With the growth of multi national corporations in the 1980s international and inter firm comparisons have gained in importance In addition there has been a move towards improving links with mainstream economic financial and social history through techniques and outlook The International Bibliography of Business History brings all of the strands together and provides the user with a comprehensive guide to the literature in the field The Bibliography is a unique volume which covers the depth and breadth of research in business history This exhaustive volume has been compiled by a team of subject specialists from around the world under the editorship of three prestigious business historians

Scientific Instruments on Display, 2014-08-14 During their active lives scientific instruments generally inhabit the laboratory observatory classroom or the field But instruments have also lived in a wider set of venues as objects on display As such they acquire new levels of meaning their cultural functions expand This book offers selected studies of instruments on display in museums national fairs universal exhibitions patent offices book frontispieces theatrical stages movie sets and on line collections The authors argue that these displays as they have changed with time reflect changing social attitudes towards the objects themselves and toward science and its heritage By bringing display to the center of analysis the collection offers a new and ambitious

Geographers Elizabeth Baigent, André Reyes Novaes, 2017-12-14 Geographers Biobibliographical Studies Volume 36 focuses on 20th century Britain and 19th and 20th century France Six essays on individual geographers are complemented by a group article which describes the building of a French school of geography From Britain the life of Sir Peter Hall one of the most distinguished geographers of recent times and a man widely known

outside the discipline is set alongside memoirs of Bill Mead who made the rich geography of the Nordic countries come alive to geographers and others in the Anglophone world Michael John Wise and Stanley Henry Beaver who made their mark through building up the institutions where academic geography was practised and through teaching and Anita McConnell whose geographical training shaped her museum curation and studies of the history of science From France the individual biography of Andr Meynier is juxtaposed with group article on the first five professors of geography at Clermont Ferrand These intellectual biographies collectively show geography and geographers profoundly affected by wider historical events the effect of war particularly the Second World War and the shaping of post war society They show the value of geographical scholarship in elucidating local circumstances and in planning national conditions and as a basis for local national and international friendship **Kew Observatory and the Evolution of Victorian Science, 1840-1910** Lee T.

Macdonald,2018-06-05 Kew Observatory was originally built in 1769 for King George III a keen amateur astronomer so that he could observe the transit of Venus By the mid nineteenth century it was a world leading center for four major sciences geomagnetism meteorology solar physics and standardization Long before government cutbacks forced its closure in 1980 the observatory was run by both major bodies responsible for the management of science in Britain first the British Association for the Advancement of Science and then from 1871 the Royal Society Kew Observatory influenced and was influenced by many of the larger developments in the physical sciences during the second half of the nineteenth century while many of the major figures involved were in some way affiliated with Kew Lee T Macdonald explores the extraordinary story of this important scientific institution as it rose to prominence during the Victorian era His book offers fresh new insights into key historical issues in nineteenth century science the patronage of science relations between science and government the evolution of the observatory sciences and the origins and early years of the National Physical Laboratory once an extension of Kew and now the largest applied physics organization in the United Kingdom *Companion*

Encyclopedia of Science in the Twentieth Century John Krige,Dominique Pestre,2013-11-05 With over forty chapters written by leading scholars this comprehensive volume represents the best work in America Europe and Asia Geographical diversity of the authors is reflected in the different perspectives devoted to the subject and all major disciplinary developments are covered There are also sections concerning the countries that have made the most significant contributions the relationship between science and industry the importance of instrumentation and the cultural influence of scientific modes of thought Students and professionals will come to appreciate how and why science has developed as with any other human activity it is subject to the dynamics of society and politics [The Morals of Measurement](#) Graeme Gooday,2004-04 The Morals of Measurement is a contribution to the social histories of quantification and electrical technology in nineteenth century Britain Germany and France It shows how the advent of commercial electrical lighting stimulated the industrialization of electrical measurement from a skilled labour intensive activity to a mechanized practice Challenging traditional accounts that focus on

the metrological standards used in measurement this book shows the central importance of trust when measurement was undertaken in an increasingly complex division of labour. Alongside ambiguities about the very nature of measurement and the respective responsibilities of humans and technologies in generating error-free numbers, the book also addresses controversies over the changing identity of the measurer through the themes of body, gender and authorship. The reader will gain fresh insights into a period when measurement was widely treated as the definitive means of gaining knowledge of the world.
