Towns and Cities: Function in Form Julian Hart, 2016-03-09 Challenging existing assumptions about how our towns and cities are structured and formed Julian Hart provides an engaging and thought provoking alternative theory of urban design This is not urban design in the sense of the practice of design rather it is a theory of the form of the town at all scales why towns and cities happen to be structured the way they are as a result of the social political legal and especially economic forces that create them The shape of the city at every scale from the internal configuration of dwellings all the way up to the superstructure of the whole city can be seen to arise from the interplay between three antagonistic socio economic tensions In going about our daily business and in championing particular political objectives we collectively fashion our cities in terms of their structure and form This leads to various new ways of understanding how and why our cities so happen to be configured the way they are The book makes a step change from any other comparable studies by understanding our towns and cities in terms of function in form This helps us to appreciate why every town is a recognisable town wherever it is Different urban environments in different parts of the world past and present can come to be seen according to their similarities instead of their differences Furthermore by appreciating how the economic influences of everyday life structure our towns and cities we can in turn begin to understand better how the shape of towns and cities affects the quality of life of inhabitants and the cohesiveness of communities In covering all scales from inside the home to macrostructure of the city the book encapsulates urban design through to town planning and does not seek to distinguish between the various design disciplines

Planning the Night-time City Marion Roberts, Adam Eldridge, 2012-11-12 The night time economy represents a particular challenge for planners and town centre managers In the context of liberalised licensing and a growing culture around the 24 hour city the desire to foster economic growth and to achieve urban regeneration has been set on a collision course with the need to maintain social order Roberts and Eldridge draw on extensive case study research undertaken in the UK and internationally to explain how changing approaches to evening and night time activities have been conceptualised in planning practice The first to synthesise recent debates on law health planning and policy this research considers how these dialogues impact upon the design management development and the experience of the night time city This is incisive and highly topical reading for postgraduates academics and reflective practitioners in Planning Urban Design and Urban Regeneration **Metric Handbook** Pamela Buxton, 2021-11-25 The Metric Handbook is the major handbook of planning and design data for architects and architecture students with over 100 000 copies sold to successive generations of architects and designers It remains the ideal starting point for any project and belongs in every design office The seventh edition references the latest regulations and construction standards and includes new chapters on data centres and logistics facilities alongside basic design data for all the major building types For each building type the book gives the basic design requirements and all the principal dimensional data and succinct guidance on how to use the information and what regulations the designer needs to be aware of As well as buildings the Metric Handbook deals with broader aspects of design such as materials acoustics and lighting and general design data on human dimensions and space requirements The Metric

Handbook is the unique reference for solving everyday planning problems **The Routledge Handbook of Place** Tim Edensor, Ares Kalandides, Uma Kothari, 2020-05-26 The handbook presents a compendium of the diverse and growing approaches to place from leading authors as well as less widely known scholars providing a comprehensive yet cutting edge overview of theories concepts and creative engagements with place that resonate with contemporary concerns and debates The volume moves away from purely western based conceptions and discussions about place to include perspectives from across the world It includes an introductory chapter which outlines key definitions draws out influential historical and contemporary approaches to the theorisation of place and sketches out the structure of the book explaining the logic of the seven clearly themed sections Each section begins with a short introductory essay that provides identifying key ideas and contextualises the essays that follow The original and distinctive contributions from both new and leading authorities from across the discipline provide a wide rich and comprehensive collection that chimes with current critical thinking in geography The book captures the dynamism and multiplicity of current geographical thinking about place by including both state of the art in depth critical overviews of theoretical approaches to place and new explorations and cases that chart a framework for future research It charts the multiple ways in which place might be conceived situated and practised This unique comprehensive and rich collection will be an essential resource for undergraduate and graduate teaching for experienced academics across a wide range of disciplines and for policymakers and place marketers It will provide an invaluable and up to date guide to current thinking across the range of disciplines such as Geography Sociology and Politics and interdisciplinary fields such as Urban Studies Environmental Studies and Planning *Enhancing Urban Safety and Security* Un-Habitat, 2012-08-21 *Enhancing Urban Safety and Security* addresses three major threats to the safety and security of cities crime and violence insecurity of tenure and forced evictions and natural and human made disasters It analyses worldwide trends with respect to each of these threats paying particular attention to their underlying causes and impacts as well as to the good policies and best practices that have been adopted at the city national and international levels in order to address these threats The report adopts a human security perspective concerned with the safety and security of people rather than of states and highlights issues that can be addressed through appropriate urban policy planning design and governance Living Architecture, Living Cities Christopher Day, Julie Gwilliam, 2019-11-08 It s widely accepted that our environment is in crisis Less widely recognized is that three quarters of environmental damage is due to cities the places where most of us live As this powerful new book elucidates global sustainability is therefore directly dependent on urban design In *Living Architecture Living Cities* Christopher Day and Julie Gwilliam move beyond the current emphasis on technological change They argue that eco technology allows us to continue broadly as before and only defers the impending disaster In reality most negative environmental impacts are due to how we live and the things we buy Such personal choices often result from dissatisfaction with our surroundings As perceived environment has a direct effect on attitudes and

motivations improving this can achieve more sustainable lifestyles more effectively than drastic building change with its notorious performance gap limitations As it is in places that our inner feelings and material reality interact perceived environment is place based Ultimately however as the root cause of unsustainability is attitude real change requires moving from the current focus on buildings and technology to an emphasis on the non material Featuring over 400 high quality illustrations this is essential reading for anyone who believes in the value and power of good design Christopher Day's philosophy will continue to inspire students with an interest in sustainable architecture urban planning and related fields
