Saga Of The Nerve Growth Factor:

The Saga of the Nerve Growth Factor Rita Levi-Montalcini, 1997 This volume is a collection of articles written by Nobel Laureate Rita Levi Montalcini and published from 1942 to 1995 Studies described in the first part set the stage for the discovery of a protein molecule which became known as the Nerve Growth Factor NGF described in detail in the second part The NGF synthesized in minute amounts in all vertebrate tissues plays an essential role in the differentiation and survival of several nerve cell populations in the peripheral and central nervous system The discovery of the NGF was defined by the Nobel Foundation as a milestone in developmental neurobiology and the author was awarded in 1986 with this prestigious award Studies pursued in subsequent years and still in progress have unveiled other fundamental properties of the NGF described in the third part of this volume

Women Scientists Magdolna Hargittai, 2015-03-04 Magdolna Hargittai uses over fifteen years of in depth conversation with female physicists chemists biomedical researchers and other scientists to form cohesive ideas on the state of the modern female scientist The compilation based on sixty conversations examines unique challenges that women with serious scientific aspirations face In addition to addressing challenges and the unjustifiable underrepresentation of women at the higher levels of academia Hargittai takes a balanced approach by discussing how some of the most successful of these women have managed to obtain professional success and personal happiness Women Scientists portrays scientists from different backgrounds different geographical regions eighteen countries from four continents and leaders from a variety of professional backgrounds including eight Nobel laureate women The book is divided into three sections Husband and Wife Teams Women at the Top and In High Positions Hargittai uses her own experience to introduce her first section on the lives of prominent scientific couples and addresses the joys and disadvantages of husband and wife teams The second section is a comprehensive exploration of the struggles and triumphs of women at the top Hargittai introduces women from countries where relatively little has been written about female scientists The final section focuses on women scientists involved with science administration and leadership Hargittai's biographical sketches role models for budding scientists The book is a much needed account of female presence and influence in the sciences

Rita Levi-Montalcini: Pioneer and Ambassador of Science Francesca Valente, My experience in childhood and adolescence of the subordinate role played by the female in a society run entirely by men had convinced me that I was not cut out to be a wife Rita Levi Montalcini Self assured from an early age Rita knew that she was cut out for a number of other roles and the difference she could make in the lives of others Prevailing over her father's traditional values Rita attended medical school and continued to study the development of the nervous system after graduating But as a Jew in fascist Italy her work came to a halt with discriminatory race laws and again later when she was forced into hiding from the Nazis In a makeshift lab built from black market items Rita continued her research in a small space she shared with her family Rita's courage to accept a fellowship in the United States when she didn't speak the language was repaid when her six

month stay stretched into thirty three years When at seventy seven years old she and Stanley Cohen won the Nobel Prize for their discovery of nerve growth factor now used in search of cures for Alzheimer s and Parkinson s diseases Rita felt like her life was just beginning Over the next two decades she spoke around the globe as an ambassador for science and humanitarianism and accomplished more than most do during an entire lifetime *Autonomic Neuroimmunology* John Bienenstock,M. Blennerhassett,E. Goetzl,2003-02-13 While it may appear that the nervous and immune systems exist as two separate entities groundbreaking observations have positively identified anatomic connections between elements of the nervous system and cells of adaptive immunity Building on this research *Autonomic Neuroimmunology* presents a scientific discussion of the current understanding of these vital neuroimmunological interactions and their implications for normal psychology and disease states Contributors document the cell biological mechanisms for the neuropeptide activation of mast cells and analyze how one or more adrenergic and peptidergic messengers modulate immunity They also explain the pathways by which cholinergic factors may suppress immunological inflammation The potential implications of organ system selective neuroimmunology for host defense and diseases are thoroughly discussed for the skin the intestines the bladder and the lungs With modern neuroimmunology now firmly established as a scientific discipline this volume supports this promising science as a pathway to novel diagnostic and therapeutic techniques for diseases of the neural immune and endocrine systems
