Ajmal Khan, Darrell J.

Weber, 2006-05-16 The halophytes are highly specialized plants which have greater tolerance to salt. They can germinate, grow and reproduce successfully in saline areas which would cause the death of regular plants. Most halophytic species are found in salt marsh systems along seashores or around landlocked inland lakes and flat plains with high evaporation. The halophytes play a very significant role in the saline areas specially in the coast by overcoming the salinity in different ways viz with regulating mechanisms in which excess salts are excreted and with out regulating mechanism which may include succulents or cumulative types. Besides that they protect coast from erosion and cyclones provide feeding ground and nursery for fish shrimps and birds. Halophytes get increasing attention today because of the steady increase of the salinity in irrigation systems in the arid and semi arid regions where the increasing population reaches the limits of freshwater availability. In many countries halophytes have been successfully grown on saline wasteland to provide animal fodder and have the potential for rehabilitation and even reclamation of these sites. The value of certain salt tolerant grass species has been recognized by their incorporation in pasture improvement programs in many salt affected regions throughout the world. There have been recent advances in selecting species with high biomass and protein levels in combination with their ability to survive a wide range of environmental conditions including salinity.

Towards the rational use of high salinity tolerant plants Helmut Lieth, A.A. Al Masoom, 2012-12-06 The Symposium on high salinity tolerant plants held at the University of Al Ain in December 1990 dealt primarily with plants tolerating salinity levels exceeding that of ocean water and which at the same time are promising for utilization in agriculture or forestry. These plants could be very useful for a country like the UAE where fresh water resources are very scarce and the groundwater available at some places is already very salty. More than 60 million woody trees shrubs have been planted so far and more are planned for the inland plains underlain with brackish groundwater. These species were no solution for the widely barren shoreline of the UAE. Here mangrove species were of potential use and one species *Avicennia Marina* occurs widely and has been successfully planted for about a decade. Converting the tree plantations into economically useful cropping systems is still a problem requiring much research and development. The book deals in several sections with conventional irrigation systems using marginal water. The species used in these systems are mostly hybrids of conventional crops. The irrigation systems however have similar problems as may be expected for irrigation with seawater. Papers show the participants experiments in this area. The volume serves as a link

between scientists working for the improvement of classical irrigation systems and those interested in the application of a new dimension of salinity levels for irrigation water

Complex Biological Systems Irina R. Fomina, Karl Y. Biel, Vladislav G. Soukhovolsky, 2018-10-16 Written and edited by some of the most well respected authors in the area of the adaptation of plants and animals to climate change this groundbreaking new work is an extremely important scientific contribution to the study of global warming Global climate change is one of the most serious and pressing issues facing our planet Rather than a silver bullet or a single study that solves it the study of global climate change is like a beach with each contribution a grain of sand gathered together as a whole to create a big picture moving the science forward This new groundbreaking study focuses on the adaptation and tolerance of plants and animal life to the harsh conditions brought on by climate change or global warming Using the papers collected here scientists can better understand global climate change its causes results and ultimately the future of life on our planet The first section lays out a methodology and conceptual direction of the work as a whole covering the modeling approaches and the impacts studied throughout the book The second section focuses on certain hypotheses laid out by the authors regarding how plants and animal life can adapt and survive in extreme environments The third section compiles a series of ecological experiments and their conclusions and a final section is dedicated to previous scientific breakthroughs in this field and the scientists who made them Whether for the scientist in the field the student or as a reference this groundbreaking new work is a must have Focusing on a small part of the global climate change beach this grain of sand is an extremely important contribution to the scientific literature and a step forward in understanding the problems and potentialities of the issue

Sustainable Agriculture Rajiv K. Sinha, *Ecophysiology of Economic Plants in Arid and Semi-Arid Lands* Gerald E. Wickens, 2013-04-17 This book deals with arid and semi arid environments and their classification and the physiological restraints and adaptations of plants to the environment Further it discusses economic botany and the needs and methods of conserving economic plants A broad view is taken regarding the definition of economic plants taking into account their value to the environment as well as to man and to livestock The individual deserts and associated semi arid regions are described in separate chapters providing background information on the regional environments in terms of climate and major plant formations The economic plants within these formations their usages geographical distribution together with their morphological and physiological adaptations are treated in detail

Handbook of Plant and Crop Physiology Mohammad Pessarakli, 2021-07-12 Continuous discoveries in plant and crop physiology have resulted in an abundance of new information since the publication of the third edition of the Handbook of Plant and Crop Physiology Following its predecessors the fourth edition of this well regarded handbook offers a unique comprehensive and complete collection of topics in the field of plant and crop physiology Divided into eleven sections for easy access of information this edition contains more than 90 percent new material substantial revisions and two new sections The handbook covers the physiology of plant and crop growth and development cellular and molecular aspects plant genetics and

production processes The book presents findings on plant and crop growth in response to climatic changes and considers the potential for plants and crops adaptation exploring the biotechnological aspects of plant and crop improvement This content is used to plan implement and evaluate strategies for increasing plant growth and crop yield Readers benefit from numerous tables figures case studies and illustrations as well as thousands of index words all of which increase the accessibility of the information contained in this important handbook New to the Edition Contains 37 new chapters and 13 extensively revised and expanded chapters from the third edition of this book Includes new or modified sections on soil plant water nutrients microorganisms physiological relations and on plant growth regulators both promoters and inhibitors Additional new and modified chapters cover the physiological responses of lower plants and vascular plants and crops to metal based nanoparticles and agrichemicals and the growth responses of plants and crops to climate change and environmental stresses With contributions from 95 scientists from 20 countries this book provides a comprehensive resource for research and for university courses covering plant and crop physiological responses under normal and stressful conditions ranging from cellular aspects to whole plants

Halophytes as a resource for livestock and for rehabilitation of degraded lands V.

Squires,A.T. Ayoub,2012-12-06 Desertification land degradation in arid semi arid and dry sub humid areas resulting mainly from adverse human impacts is the main environmental problem of dry lands which occupy more than 40 per cent of the total global land area The phenomenon threatens about 3 6 billion hectares and currently affects the livelihood of about 900 million people Thl world is now losing annually about 1 5 million hectares of total irrigated lands 240 million hectares due mostly to salinization mainly in drylands Salt affected soils are widely distributed throughout the arid and semi arid regions and particularly severe in China 7 million ha India 20 million ha Pakistan 3 2 million ha USA 5 2 million ha as well as Near East southern Europe and elsewhere Demands on production have increased the pressure on existing productive land and moved the limits of production onto increasingly marginal lands Wise land use practices have yet to be developed for such conditions The Executive Director of UNEP reported to the Governing Council in February 1992 concerning the Status of Desertification and Implementation of the United Nations Plan of Action to Combat Desertification PACD The Report concludes that major efforts to implement the PACD had gone into supporting measures rather than concrete corrective field operations Little evidence of progress was found in irrigated croplands rainfed croplands or rangelands It was recommended that every piece of land should be used in keeping with its ecological characteristics natural capabilities and constraints

Agroforestry Guides for Pacific Islands Craig R. Elevitch,Kim M. Wilkinson,2000 Cash Crop Halophytes: Recent Studies Helmut Lieth,Marina Mochtchenko,2013-11-11 This volume follows up a seminal meeting presenting reports on progress made with recommendations made there The text reports on the development of pilot projects and on the organization of an international organization All this will serve as the foundation for future efforts to develop the common utilisation of cash crop halophytes

Energy and Environmental Security in Developing Countries Muhammad

Asif,2021-03-02 This book presents a comprehensive account of the energy and environmental security perspectives of the developing countries To address the subject comprehensively it covers four geographically diverse clusters of developing countries from across the world The regions particularly focused on are South Asia South East Asia Sub Sahara Africa and Latin America It is a valuable contribution to the debate and policy and research activities around the subjects of energy and environmental security in the developing countries and beyond The book covers the interwoven subjects of energy security and environmental security in the context of developing countries for the first time It discusses the latest dimensions challenges and solutions around taking into account technical economic social and policy perspectives It incorporates up to date data case studies and comparative assessment This edited book has contributions from established as well as emerging scholars from around the world It benefits a wide range of stakeholders from the fields of energy environment and sustainable development It is of help to academics researchers and analysts in these fields besides having appeal for policymakers and national and international developmental organizations It also helps developing countries to learn from each other s experiences Our Common Journey National Research Council,Policy and Global Affairs,Policy Division,Board on Sustainable Development,1999-11-09 World human population is expected to reach upwards of 9 billion by 2050 and then level off over the next half century How can the transition to a stabilizing population also be a transition to sustainability How can science and technology help to ensure that human needs are met while the planet s environment is nurtured and restored Our Common Journey examines these momentous questions to draw strategic connections between scientific research technological development and societies efforts to achieve environmentally sustainable improvements in human well being The book argues that societies should approach sustainable development not as a destination but as an ongoing adaptive learning process Speaking to the next two generations it proposes a strategy for using scientific and technical knowledge to better inform future action in the areas of fertility reduction urban systems agricultural production energy and materials use ecosystem restoration and biodiversity conservation and suggests an approach for building a new research agenda for sustainability science Our Common Journey documents large scale historical currents of social and environmental change and reviews methods for what if analysis of possible future development pathways and their implications for sustainability The book also identifies the greatest threats to sustainability in areas such as human settlements agriculture industry and energy and explores the most promising opportunities for circumventing or mitigating these threats It goes on to discuss what indicators of change from children s birth weights to atmosphere chemistry will be most useful in monitoring a transition to sustainability **Neem** National Research Council,Board on Science and Technology for International Development,1992-02-01 The neem tree one of the most promising of all plants may eventually benefit every person on the planet Probably no other plant yields as many varied products or has as many exploitable by products Indeed as foreseen by some scientists this tree may usher in a new era in pest control provide millions with inexpensive medicines cut the rate of

population growth and perhaps even reduce erosion deforestation and the excessive temperature of an overheated globe On the other hand although the enthusiasm may be justified it is largely founded on exploratory investigations and empirical and anecdotal evidence The purpose of this book is to marshal the various facts about this little known species to help illuminate its future promise and to speed realization of its potential

Sabkha Ecosystems M. Ajmal Khan, Benno Böer, Münir Öztürk, Thabit Zahran Al Abdessalaam, Miguel Clüsener-Godt, Bilquees Gul, 2014-05-12 Sustainable development is the key for the survival in 21st century The natural resources are finite and cannot be used with impunity because we are the custodian of these resources and have responsibility to pass these to the next generation This monumental task requires several major commitments and most important of them is to arrest population explosion which has already reached seven billion Natural resources like air to breath food to eat and water to drink and fossil fuel to maintain this life style are being overexploited Unrestrained consuming culture will accelerate undesired situation This situation will have more dire consequences in resource limited ecosystems like dry lands Given the severe scarcity of water ever increasing population and soil salinization out of the box solutions for the provision of food and clean energy is required to spare meager fresh water resources for conventional agriculture This volume contains a number of articles dealing with halophyte ecology bio geography ecophysiology hyper saline soils biofuels biosaline agriculture biosaline landscaping climate change mitigation and biodiversity It also contains the communication of innovative ideas such as the research into floating mangroves seagrass terraces as well as a World Halophyte Garden containing all known salt tolerant plant species It is hoped that the information provided will not only advance vegetation science but that it will truly generate more interdisciplinarity networking awareness and inspire farmers and agricultural and landscaping stakeholders to seriously engage in halophyte cash crop production in coastal hyper saline areas

Vetiver Grass National Research Council, Policy and Global Affairs, Board on Science and Technology for International Development, Panel on Vetiver, 1993-02-01 For developing nations soil erosion is among the most chronic environmental and economic burdens Vast amounts of topsoil are washed or blown away from arable land only to accumulate in rivers reservoirs harbors and estuaries thereby creating a double disaster a vital resource disappears from where it is desperately needed and is deposited where it is equally unwanted Despite much rhetoric and effort little has been done to overcome this problem Vetiver a little known tropical grass offers one practical and inexpensive way to control erosion on a huge scale in both humid and semi arid regions Hedges of this deeply rooted species catch and hold back sediments while the stiff foliage acts as a filter that also slows runoff and keeps moisture on site This book assesses vetiver s promise and limitations and identifies places where this grass can be deployed without undue environmental risk

Climate Change and the Sustainable Use of Water Resources Walter Leal Filho, 2011-09-29 The book explores the geo chemical physical social and economic impacts of climate change on water supplies It contains examples and case studies from a wide range of countries and addresses the need to promote sustainable water use across the world
