

- This inefficient management of water can lead to the twin problems of water logging and salinisation.
- When too much water flows over the land it can become waterlogged, and crops quickly rot and die.
- Salinisation occurs when the natural salts contained in irrigation water seep into the ground and build up in the soil, making it too salty (saline) to grow crops.

In the Indus valley in Pakistan, salinisation is a major problem for farmers. Hot temperatures cause the water in the soil to evaporate. As a result, the salts are left behind and ruin the farmland.

Salinisation of Land and Water Resources Fereidoun Ghassemi,A. J. Jakeman,H. A. Nix,1995 Human induced salinisation is a major threat to the world s land and water resources Inadequate development of irrigation projects inefficient irrigation lack of proper drainage and environmental mismanagement such as the clearing of native vegetation are responsible for the loss of millions of hectares of agricultural and grazing land as well as the misuse of scarce water resources The first part of this book analyses the problem in the context of the world s population its climate and its land and water resources It reviews irrigation methods and crop water requirements the processes of salinisation and its management The second part describes irrigated land dryland and water resource salinity problems in 11 countries which contain approximately 70 per cent of the world s irrigated land In each case study background data environmental conditions and past management practices are given to provide an understanding of why salinity occurs in particular places and of the management methods employed against it

A review of management strategies for salt-prone land and water resources in Iran Asad Sarwar Qureshi,Manzoor Qadir,Nader Heydari,Hugh Turrall,Arzhang Javadi,2007-11-16 Approximately half of the irrigated area of Iran falls under different types of salt affected soils and average yield losses may be as high as 50 percent Slightly and moderately salt affected soils are mostly found on the piedmonts at the foot of the Elburz Alborz Mountains in the northern part of the country The soils having severe to extreme salinity are predominantly located in the Central Plateau the Khuzestan and Southern Coastal Plains and the Caspian Coastal Plain The

process of salinization of the surface water resources is mainly due to natural conditions and to a lesser extent to the discharge of drainage water into the river systems Estimates show that about 6 7 km³ of brackish water flow annually through 12 major rivers There is no straightforward solution to the complex problems of salt induced soil and water resources degradation in Iran The approaches addressing the management of these resources need to be multidimensional and must take into account biophysical and environmental conditions of the target areas as well as livelihood aspects of the associated communities *Water Resources Perspectives: Evaluation, Management and Policy* W.W. Environment — Plants — Molecules André Läuchli,Ulrich Lüttge,2007-05-08 In biology the very big global and thevery small molecular issues currently appear to be in the limelight ofpublic interest and research funding policies They are in danger of drifting apart from each other They apply very coarse and very fine scaling respectively but coherence is lost when the various intermediate levels of different scales are neglected Regarding SALINITY we are clearly dealing with a global problem which due to progressing salinization of arable land is of vital interest for society Explanations and basic understanding as well as solutions and remedies may finally lie at the molecular level It is a general approach in science to look for understanding of any system under study at the next finer or lower level of scaling This in itself shows that we need a whole ladder of levels with increasingly finer steps from the global impact to the molecular bases of SALINITY relations It is in this vein that the 22 chapters of this book aim at providing an integrated view of SALINITY Remote Sensing of Soil

Management of Dryland Salinity CSIRO, 2000 Dryland salinity is becoming a growing problem for Australia as it impacts upon agriculture water quality infrastructure and the environment In the context of developing a national policy for natural resource management

this report contains the outcomes of the review of the current national policy framework on dryland salinity and outlines new strategic directions This policy framework recognises that dryland salinity should be addressed in an integrated manner with other land water and vegetation degradation issues Rather than in isolation and at the appropriate catchment and regional scale While this report can provide a broad approach to addressing dryland salinity it does not suggest that the dryland salinity problem can be entirely solved or that we have all the knowledge required to develop solutions to the problem The directions outlined in this document are the result of a fruitful collaboration across jurisdictions acknowledging that governments and industry must work together in partnership with communities to ensure that the future management of dryland salinity achieves significant positive change

Science and Policy in Natural Resource Management Helen E. Allison, Richard J. Hobbs, 2006-08-31 This book was first published in 2006 Despite many well intentioned policies and changes to management practices the world's natural resources continue to decline The roles and interplay between science and policy in the regional broadacre agriculture landscape are examined here offering readers a thorough understanding of the complex interactions that occur across spatial scales to produce the regional scale impacts The fundamental causes of resource degradation social decline and environmental pollution are addressed examining the cross scale drivers from the individual farm level to the global level of commodity systems Broadacre agriculture is a common land use throughout all continents of the world and is driven by the same type of dynamics and this case study of the Western Australia agricultural region can be used to clearly demonstrate the principles for other agricultural systems Aimed at academics ranging from researchers through to policy analysts this book will inspire innovation and action in sustainable natural resource management

advance vegetation science but that it will truly generate more interdisciplinarity networking awareness and inspire farmers and agricultural and landscaping stakeholders to seriously engage in halophyte cash crop production in coastal hyper saline areas

Salinity and Water Stress M. Ashraf, M. Ozturk, Habib-ur-Rehman Athar, 2008-12-26 Salinity and water stress limit crop productivity worldwide and generate substantial economic losses each year yet innovative research on crop and natural resource management can reveal cost effective ways in which farmers can increase both their productivity and their income Presenting recent research findings on salt stress water stress and stress adapted plants this book offers insights into new strategies for increasing the efficiency of crops under stressful environments The strategies are based on conventional breeding and advanced molecular techniques used by plant physiologists and are discussed using specific case studies to illustrate their potential The book emphasizes the effects of environmental factors on specific stages of plant development and discusses the role of plant growth regulators nutrients osmoprotectants and antioxidants in counteracting their adverse affects Synthesising updated information on mechanisms of stress tolerance at cell tissue and whole plant level this book provides a useful reference text for post graduate students and researchers involved in the fields of stress physiology and plant physiology in general with additional readership amongst researchers in horticulture agronomy crop science conservation environmental management and ecological restoration
