functions of marine ecosystems The text first covers the oceans including its extent and depths currents and biological features Chapter 2 deals with marine planktons Next the book discusses the measuring and sampling techniques used at sea to obtain information of interest The fourth chapter tackles the parameters of marine environment while the fifth chapter deals with organic production in the sea The text also covers the two extremities of the sea that are the seashore and the sea bottom The last chapter discusses some concerns in sea fisheries The book will be of great use to researchers and professionals whose work involves marine flora and fauna

The Biogeochemical Cycle of Silicon in the Ocean Bernard Quéguiner,2016-06-16 In the biogeochemical dynamics of marine ecosystems silicon is a major element whose role has for a long time been underestimated It is however indispensable to the activity of several biomineralizing marine organisms some of which play an essential role in the biological pump of oceanic carbon This book presents notions indispensable to the knowledge on the silicon biogeochemical cycle in ocean systems first of all describing the main quantitative analysis techniques and examination of the major organisms involved in the cycle The author then moves on to study the most up to date processes to control the use of silicon and its regeneration in natural conditions before mentioning the central role played by this original element in the control of all the biogeochemical cycles in the global ocean The available information finally enables the global biogeochemical budget of silicon in the marine environment to be quantified
