the continual reports of Water Monsters Bigfoot Mystery Big Cats and U F C s Unidentified Flying Cryptids are largely ignored or used as newspaper fillers to entertain us Andy s focus is on current research and sightings pictures videos and eyewitness accounts of the many cryptids of the British Isles Although vast advancements in science and technology have brought great discoveries in other lesser known parts of the world our island lies largely underexplored and overlooked At night outside of the busy cities and next to the unlit lakes and lonely mountains it is an island in darkness where nobody ventures into the woods anymore and the pervading paradigm scare all but the most foolhardy scientists away from any serious investigation of the many yet to be discovered Beasts Of Britain

Disentangled R. France,2023-09-14 The Definitive Study and Solution to the Centuries old Mystery of the World s Most Sighted Sea Serpent There is a long history of conflating sightings of unidentified marine objects UMOs as purported sea serpents Most sightings are either of an extremely brief duration or made by a single observer and thus often easy to dismiss This is not the case however with respect to the so called Gloucester Sea Serpent which frequented the Massachusetts and New York coasts during the early nineteenth century Witnessed by hundreds of people for extended periods repeatedly over many days the Gloucester UMO is the most sighted sea serpent in history As well due to being the object of study at the time and shortly thereafter by naturalists the mysterious creature remains the most thoroughly investigated of all putative sea serpents For these reasons it has achieved an exalted status among cryptozoologists who maintain it represents the best evidence for the existence of sea serpents For the first time an eminently qualified aquatic biologist and ethnozoologist presents the definitive history of the phenomena and carefully examines the evidence It is concluded that the most parsimonious explanation behind the Gloucester Sea Serpent is as early evidence for what is today recognized as being one of the most serious threats to marine biodiversity entanglement in fishing gear and other maritime debris Therefore although widely considered to be restricted to the advent and widespread use of non degradable plastic in the middle of the twentieth century this new interpretation of the Gloucester UMO suggests that entanglement has a much longer environmental history than is commonly
