Friedman, 2014-10-22 Winner of the John Lyman Book Award for Naval and Maritime Science and Technology A compelling and convincing historical analysis of World War I Navy News While the overriding image of the First World War is of the bloody stalemate on the western front the overall shape of the war arose out of its maritime character It was essentially a struggle about access to worldwide resources most clearly seen in Germany s desperate attempts to counter the American industrial threat which ultimately drew the United States into the war This radical new book concentrates on the way in which each side tried to use or deny the sea to the other and in so doing describes rapid wartime changes not only in ship and weapons technology but also in the way naval warfare was envisaged and fought Melding strategic technical and tactical aspects Friedman approaches the First World War from a fresh perspective and demonstrates how its perceived lessons

dominated the way navies prepared for the Second World War Friedman is a master of the evolution of naval strategy tactics and technology a rewarding read that will leave many wanting to return again and again just to see what they might have missed the first time Australian Naval Institute Dr Friedman s research credentials are impeccable and the huge amount of factual detail he has unearthed will be sure to delight many there is nothing comparable in either depth or scope out there and for this reason if no other this book is likely to become a standard work on the naval aspects of the Great War Naval War College Review *Proceedings of the United States Naval Institute* United States Naval Institute,1922 **United States**

Anti-Submarine Warfare in World War I John Abbatiello, 2006-05-02 Investigating the employment of British aircraft against German submarines during the final years of the First World War this new book places anti submarine campaigns from the air in the wider history of the First World War The Royal Naval Air Service invested heavily in aircraft of all types aeroplanes seaplanes airships and kite balloons in order to counter the German U boats Under the Royal Air Force the air campaign against U boats continued

uninterrupted Aircraft bombed German U boat bases in Flanders conducted area and hunting patrols around the coasts of Britain and escorted merchant convoys to safety Despite the fact that aircraft acting alone destroyed only one U boat during the war the overall contribution of naval aviation to foiling U boat attacks was significant Only five merchant vessels succumbed to submarine attack when convoyed by a combined air and surface escort during World War I This book examines aircraft and weapons technology aircrew training and the aircraft production issues that shaped this campaign Then a close examination of anti submarine operations bombing patrols and escort yields a significantly different judgment from existing interpretations of these operations This study is the first to take an objective look at the writing and publication of the naval and air official histories as they told the story of naval aviation during the Great War The author also examines the German view of aircraft effectiveness through German actions prisoner interrogations official histories and memoirs to provide a comparative judgment The conclusion closes with a brief narrative of post war air anti submarine developments and a summary of findings Overall the author concludes that despite the challenges of organization training and production the employment of aircraft against U boats was largely successful during the Great War This book will be of interest to historians of naval and air power history as well as students of World War I and military history in general

Inventions of the Great War Alexander Russell Bond, 2024-11-24 The great World War was more than two thirds over when America entered the struggle and yet in a sense this country was in the war from its very beginning Three great inventions controlled the character of the fighting and made it different from any other the world has ever seen These three inventions were American The submarine was our invention it carried the war into the sea The airplane was an American invention it carried the war into the sky We invented the machine gun it drove the war into the ground It is not my purpose to boast of American genius but rather to show that we entered the war with heavy responsibilities The inventions we had given to the world had been developed marvelously in other lands Furthermore they were in the hands of a determined and unscrupulous foe and we found before us the task of overcoming the very machines that we had created Yankee ingenuity was faced with a real test The only way of overcoming the airplane was to build more and better machines than the enemy possessed This we tried to do but first we had to be taught by our allies the latest refinements of this machine and the war was over before we had more than started our aerial program The machine gun and its accessory barbed wire also an American invention were overcome by the tank and we may find what little comfort we can in the fact that its invention was inspired by the sight of an American farm tractor But the tank was a British creation and was undoubtedly the most important invention of the war On the sea we were faced with a most baffling problem The U boat could not be coped with by the building of swarms of submarines The essential here was a means of locating the enemy and destroying him even while he lurked under the surface Two American inventions the hydrophone and the depth bomb made the lot of the U boat decidedly unenviable and they hastened if they did not actually end German frightfulness on the sea But these were by no means the only inventions of the war Great Britain showed wonderful ingenuity and resourcefulness in many directions France did marvels with the airplane and showed great cleverness in her development of the tank and there was a host of minor inventions to her credit while Italy showed marked skill in the creation of large airplanes and small seacraft The Illustrated War News ,1916 **Aeronautics** ,1920
