Science Education and Citizenship S. Terzian, 2012-12-28 Science fairs clubs and talent searches are familiar fixtures in American education yet little is known about why they began and grew in popularity In Science Education and Citizenship Sevan G Terzian traces the civic purposes of these extracurricular programs for youth over four decades in the early to mid twentieth century He argues that Americans mobilization for World War Two reoriented these educational activities from scientific literacy to national defense a shift that persisted in the ensuing atomic age and has left a lasting legacy in American science education

Astonishing Ancient World Scientists Amy Graham, 2009 Read about some of the most well known ancient scientists and mathematicians Pythagoras Hippocrates Aristotle Archimedes Galen Ptolemy Zhang Heng and al Khwarizmi Provided by publisher

Scientific Discovery Pat Langley, 1987 Scientific discovery is often regarded as romantic and creative and hence unanalyzable whereas the everyday process of verifying discoveries is sober and more suited to analysis Yet this fascinating exploration of how scientific work proceeds argues that however sudden the moment of discovery may seem the discovery process can be described and modeled Using the methods and concepts of contemporary information processing psychology or cognitive science the authors develop a series of artificial intelligence programs that can simulate the human thought processes used to discover scientific laws The programs BACON DALTON GLAUBER and STAHL are all largely data driven that is when presented with series of chemical or physical measurements they search for uniformities and linking elements generating and checking hypotheses and creating new concepts as they go along Scientific Discovery examines the nature of scientific research and reviews the arguments for and against a normative theory of discovery describes the evolution of the BACON programs which discover quantitative empirical laws and invent new concepts presents programs that discover laws in qualitative and quantitative data and ties the results together suggesting how a combined and extended program might find research problems invent new instruments and invent appropriate problem representations Numerous prominent historical examples of discoveries from physics and chemistry are used as tests for the programs and anchor the discussion concretely in the history of science

Innocent Experiments Rebecca Onion, 2016-10-04 From the 1950s to the digital age Americans have pushed their children to live science minded lives cementing scientific discovery and youthful curiosity as inseparable ideals In this multifaceted work historian Rebecca Onion examines the rise of informal children s science education in the twentieth century from the proliferation of home chemistry sets after World War I to the century long boom in child centered science museums Onion looks at how the United States has increasingly focused its energies over the last century into producing young scientists outside of the classroom She shows that although Americans profess to believe that success in the sciences is synonymous with good citizenship this idea is deeply complicated in an era when scientific data is hotly contested and many Americans have a conflicted view of science itself These contradictions Onion explains can be understood by examining the histories of popular science and the

development of ideas about American childhood She shows how the idealized concept of science has moved through the public consciousness and how the drive to make child scientists has deeply influenced American culture **Science, Public Policy and the Scientist Administrator** National Institutes of Health (U.S.),1971 *NIAAA Information and Feature Service* ,1974-05 Catalog of Federal Domestic Assistance ,2000 Identifies and describes specific government assistance opportunities such as loans grants counseling and procurement contracts available under many agencies and programs
