Applications Mesquita, Anabela, 2011-03-31 This book provides empirical research findings and best practices on creativity and innovation in business organizational and social environments Provided by publisher *Theory of the Nuclear Magnetic 1/T1 Relaxation Rate in Conventional and Unconventional Magnets* Andrew Smerald, 2013-08-13 One of the best ways to lift the lid on what is happening inside a given material is to study it using nuclear magnetic resonance NMR Of particular interest are NMR 1 T1 relaxation rates which measure how fast energy stored in magnetic nuclei is transferred to surrounding electrons This thesis develops a detailed quantitative theory of NMR 1 T1 relaxation rates and shows for the first time how they could be used to measure the speed at which energy travels in a wide range of magnetic materials This theory is used to make predictions for Quantum Spin Nematics an exotic form of quantum order analogous to a liquid crystal In order to do so it is first necessary to unravel how spin nematics transport energy This thesis proposes a new way to do this based on the description of quarks in high energy physics Experiments to test the ideas presented are now underway in laboratories across the world *Leadership and Cultural Webs in Organisations* Adrian McLean, 2013-12-05 The call for a change of culture is common in organisations but what this means and how to go about it have proved to be elusive challenges for leadership studies Building on the metaphor of cultures as webs McLean considers how cultures form and change and shows how to reveal the unique forms they take in different organisational settings **The Economics of Search** Brian McCall, John McCall, 2007-12-20 The economics of search is a prominent component of economic theory and it has a richness and elegance that underpins a host of practical applications In this book Brian and John McCall present a comprehensive overview of the economic theory of search from the classical model of job search formulated 40 years ago to the recent developments in eq **Searches for Dijet Resonances** Lydia Audrey Beresford, 2018-09-04 This book addresses one of the most intriguing mysteries of our universe the nature of dark matter The results presented here mark a significant and substantial contribution to the search for new physics in particular for new particles that couple to dark matter The first analysis presented is a search for heavy new particles that decay into pairs of hadronic jets dijets This pioneering analysis explores unprecedented dijet invariant masses reaching nearly 7 TeV and sets constraints on several important new physics models The two subsequent analyses focus on the difficult low dijet mass region down to 200 GeV and employ a novel technique to efficiently gather low mass dijet events The results of these analyses transcend the long standing constraints on dark matter mediator particles set by several existing experiments **Searches for the Supersymmetric Partner of the Top Quark, Dark Matter and Dark Energy at the ATLAS Experiment** Nicolas Maximilian Köhler, 2019-09-13 Astrophysical observations implying the existence of Dark Matter and Dark Energy which are not described by the Standard Model SM of particle physics have led to extensions of the SM predicting new particles that could be directly produced at the Large Hadron Collider LHC at CERN Based on 2015 and 2016 ATLAS proton proton collision data this thesis presents searches for the supersymmetric partner of the top quark for Dark Matter and for DarkEnergy in signatures with jets and

missing transverse energy Muon detection is key to some of the most important LHC physics results including the discovery of the Higgs boson and the measurement of its properties The efficiency with which muons can be detected with the ATLAS detector is measured using Z boson decays The performance of high precision Monitored Drift Tube muon chambers under background rates similar to the ones expected for the High Luminosity LHC is studied [Guide to Organisation Design](#)

Naomi Stanford, The Economist, 2015-04-28 Business failure is not limited to start ups Industry Watch published by BDO Stoy Hayward an accounting firm predicts that 17 043 businesses will fail in the UK in 2006 a further 4 per cent increase from 2005 In America between 1990 and 2000 there were over 6 3 million business start ups and over 5 7 million business shut downs Risk of failure can be greatly reduced through effective organizational design that encourages high performance and adaptability to changing circumstances Organization design is a straightforward business process but curiously managers rarely talk about it and even more rarely take steps to consciously design or redesign their business for success This new Economist guide explores the five principles of effective organization design which are that it must be driven by the business strategy and the operating context not by a new IT system a new leader wanting to make an impact or some other non business reason involve holistic thinking about the organization be for the future rather than for now not to be undertaken lightly it is resource intensive even when going well be seen as a fundamental process not a repair job Racing cars are designed and built They are then kept in good repair
