Searching Multimedia Databases By Content:

Searching Multimedia Databases by Content Christos Faloutsos, 2012-12-06 Searching Multimedia Databases by Content bridges the gap between the database and signal processing communities by providing the necessary background information for the reader and presenting it along with the intuition and mechanics of the best existing tools in each area The first half of Searching Multimedia Databases by Content reviews the most successful database access methods in increasing complexity reaching up to spatial access methods and text retrieval In all cases the emphasis is on practical approaches that have been incorporated in commercial systems or that seem very promising The second half of the book uses the above access methods to achieve fast searching in a database of signals A general methodology is presented which suggests extracting a few good features from each multimedia object thus mapping objects into points in a metric space Finally the book concludes by presenting some recent successful applications of the methodology on time series and color images Searching Multimedia Databases by Content is targeted towards researchers and developers of multimedia systems The book can also serve as a textbook for a graduate course on multimedia searching covering both access methods as well as the basics of signal processing

Miaoulis,2008-10-02 The purpose of this volume is to present current work of the Intelligent Computer Graphics community a community growing up year after year Indeed if at the beg ning of Computer Graphics the use of Artificial Intelligence techniques was quite unknown more and more researchers all over the world are nowadays interested in intelligent techniques allowing substantial improvements of traditional Computer Graphics methods The other main contribution of intelligent techniques in Computer Graphics is to allow invention of completely new methods often based on automation of a lot of tasks assumed in the past by the user in an imprecise and human time consuming manner The history of research in Computer Graphics is very edifying At the beginning due to the slowness of computers in the years 1960 the unique research concern was visualisation The purpose of Computer Graphics researchers was to find new visua sation algorithms less and less time consuming in order to reduce the enormous time required for visualisation A lot of interesting algorithms were invented during these first years of research in Computer Graphics The scenes to be displayed were very simple because the computing power of computers was very low So scene modelling was not necessary and scenes were designed directly by the user who had to give co ordinates of vertices of scene polygons *Reconfigurable Computing: Architectures, Tools and Applications* Pedro C. Diniz,2007-03-19 This book constitutes the refereed proceedings of the Third International Workshop on Applied Reconfigurable Computing ARC 2007 held in Mangaratiba Brazil in March 2007 The 27 full papers and 10 short papers presented together with a late comer contribution from ARC 2006 are organized in topical sections on architectures

mapping techniques and tools arithmetic and applications KI 2008: Advances in Artificial Intelligence Andreas Dengel, Karsten Berns, Thomas Breuel, Frank Bomarius, Thomas R. Roth-Berghofer, 2008-09-24 KI 2008 was the 31st Annual German Conference on Artificial Intelligence held September 23-26 at the University of Kaiserslautern and the German Research Center for Artificial Intelligence DFKI GmbH in Kaiserslautern Germany. The conference series started in 1975 with the German Workshop on AI (GWA) which took place in Bonn and represents the first forum of its type for the German AI Community. Over the years AI has become a major field in computer science in Germany involving a number of successful projects that received much international attention. Today KI conferences are international forums where participants from academia and industry from all over the world meet to exchange their recent research results and to discuss trends in the field. Since 1993 the meeting has been called the Annual German Conference on Artificial Intelligence designated by the German acronym KI. This volume contains the papers selected out of 77 submissions including a number of submissions from outside German speaking countries. In total 15 submissions 19% were accepted for oral and 30 39% for poster presentation. Oral presentations at the conference were in a single track. Because of this the choice of presentation form oral poster was based on how well reviews indicated that the paper would fit into one or the other format. The proceedings allocate the same space to both types of papers. In addition we selected six papers that show high application potential describing systems or prototypical implementations of innovative AI technologies. They are also included in this volume as two page extended abstracts.
