Organizations An Information Systems Perspective:

Organizations Kenneth Knight, Reuben R. McDaniel (Jr.), 1979 **Adopting Information Systems Perspectives from Small Organizations** Özgün Imre, 2017-12-08

Why do organizations adopt information systems Is it just because of financial reasons of concerns for efficiency Or is it due to external pressures such as competitor pressure that an organization adopts an information system And how does the adoption take place Is it a linear process or is the process one of conflicts Does a specific person govern this process or do we have multiple parties involved What happens if these conflicts occur among those involved How does the organization move on and achieve a successful information system adoption By investigating two organizations one international academic journal and one South American manufacturing company this thesis aims to investigate the whys and hows of information system adoption and aims to contribute to the discourse on information system adoptions in small organizations an often underrepresented segment in information system adoption literature By adopting different theoretical lenses throughout the five research papers included this body of work suggests that even when seemingly simple information system adoptions can become rather complex The cases reveal that the role of information systems and issues related to information system adoptions are often not well thought out in the early days of the organization The actors understandings of adoption and consequences mature and the information systems become more intertwined Common use of stakeholder theory introduces general stakeholders and their interaction with the focal organization The cases reveal that the adoption process involves multiple actors even within what would initially appear as a stakeholder and that those actors can be in conflict with each other These conflicts often lead to negotiations and the cases reveal that these negotiations are opportunities of learning the actors engage with the information system and with each other gaining new knowledge about the issues at hand The dissertation argues that there are various social worlds in information system adoptions and various factors ranging from organizational structure to social norms that often affect why and how the organization undergoes an adoption process The multiple power relations and divergent interests of stakeholders in these adoption processes and how information systems affect other parts of the organization reinforce the need for a well thought out flexible and reflexive approach to information system adoptions **Information Systems Research** Bonnie Kaplan, Duane P. Truex, David Wastell, A. Trevor Wood-Harper, Janice DeGross, 2004-06-30

Information Systems Research Relevant Theory and Informed Practice comprises the edited proceedings of the WG8 2 conference Relevant Theory and Informed Practice Looking Forward from a 20 Year Perspective on IS Research which was sponsored by IFIP and held in Manchester England in July 2004 The conference attracted a record number of high quality manuscripts all of which were subjected to a rigorous reviewing process in which four to eight track chairs associate editors and reviewers thoughtfully scrutinized papers by the highly regarded as well as the newcomers No person or idea was considered sacrosanct and no paper made it through this process unscathed All authors were asked to revise the accepted papers some

more than once thus good papers got better With only 29 percent of the papers accepted these proceedings are significantly more selective than is typical of many conference proceedings This volume is organized in 7 sections with 33 full research papers providing panoramic views and reflections on the Information Systems IS discipline followed by papers featuring critical interpretive studies action research theoretical perspectives on IS research and the methods and politics of IS development Also included are 6 panel descriptions and a new category of bright idea position papers 11 in all wherein main points are summarized in a pithy and provocative fashion

Managing Web-Enabled Technologies in Organizations: A Global Perspective Khosrow-Pour, D.B.A., Mehdi, 1999-07-01 Technological advancements of the past

several decades in computer and telecommunication technologies have had a profound impact upon the fundamental structures of society and particularly upon organizations. As these technologies have matured and developed, many organizations have been looking into the organizational and managerial changes that can be made that allow the organization to achieve greater utilization of these technologies to improve their competitive postures. Web-enabled technologies have become a serious contender. Many global organizations are looking into the emerging web-enabled technologies to make their dispersed operations around the world more efficient and maintaining greater control over their resources. Those organizations that have not attempted to identify and master the many applications of web-enabled technologies will have serious difficulty competing and surviving. This book gives you the latest research findings, writings related to the web-enabled technologies utilization and management in organizations throughout the world.

Interpreting Information Systems in Organizations Geoff Walsham, 1993-02-16. Collaborative Networked Organizations Luis M. Camarinha-Matos, Hamideh Afsarmanesh, 2007-05-08. A research agenda for collaborative networks. Purpose: Many practical application experiments and pilot cases nowadays provide evidence on what works and what still remains as a challenge for collaborative networked organizations. CNOs: The fast evolution of the information and communication technologies and in particular the so-called Internet technologies also represents an important motivator for the emergence of new forms of collaboration. However, most efforts in this area are highly fragmented, considering only some partial facets and not a holistic perspective that would be required. We are therefore at a point in which it is necessary to define much more consolidated and sustainable research strategies for a second phase of research and development in this area. This book addresses the main disciplines involved in CNOs. It further synthesizes the views and opinions expressed by a large number of visionaries from the main disciplines involved in CNOs and offers a comprehensive set of recommendations for the establishment of a research agenda on collaborative networks. As recognized experts in their specific areas, different authors in this book have presented work that is backed by a large number of research results, each focusing on specific facets of collaborative networks and coming out of a large number of international and national projects.
