Origin Of The Species:

On the Origin of Species Charles Darwin, 2008-11-13 In *The Origin of Species* 1859 Darwin challenged many of the most deeply held beliefs of the Western world Arguing for a material not divine origin of species he showed that new species are achieved by natural selection The Origin communicates the enthusiasm of original thinking in an open descriptive style and Darwin's emphasis on the value of diversity speaks more strongly now than ever As well as a stimulating introduction and detailed notes this edition offers a register of the many writers referred to by Darwin in the text Dame Gillian Beer is Fellow of the British Academy and of the Royal Society of Literature Her *Darwin's Plots* 1983 second edition 2000 was followed by *Open Fields* Science in Cultural Encounter 1996 More recently she has been working on Carroll's Alice books in the context of nineteenth century intellectual controversies and a new collection of her essays on literature and science is scheduled for 2008

The Origin of Species Charles Darwin, 1909 First published in 1859 this landmark book on evolutionary biology was not the first to deal with the subject but it went on to become a sensation and a controversial one for many religious people who could not reconcile Darwin's science with their faith Darwin worked on the book for over 20 years before its publication The radical crux of his scientific theory was the idea of natural selection which meant that chance not a divine Creator played a great role in humanity's advancement and that individuals who weren't physically able to adapt with the greater populace died off

The Origin of Species (Squashed Edition) Charles Darwin, 2019-01-09 The Squashed edition of *The Origin of Species* by Charles Darwin Abridged from the original text to read in an hour or so Squashed editions are precise abridgements the original ideas in their own words the full beam of the book the quotable quotes and all the famous lines but neatly honed down to the length of a readable short story Like reading the bible without all the begats Prof Jim Curtis

The Origin of Species Charles Darwin, 1958-04-01 With an Introduction by Jeff Wallace A grain in the balance will determine which individual shall live and which shall die Darwin's theory of natural selection issued a profound challenge to orthodox thought and belief no being or species has been specifically created all are locked into a pitiless struggle for existence with extinction looming for those not fitted for the task Yet *The Origin of Species* 1859 is also a humane and inspirational vision of ecological interrelatedness revealing the complex mutual interdependencies between animal and plant life climate and physical environment and by implication within the human world Written for the general reader in a style which combines the rigour of science with the subtlety of literature *The Origin of Species* remains one of the founding documents of the modern age

Origin of Species Charles Darwin, 1902 *The Origin of Species (Unabridged 1859 Version)* Charles Darwin, 2019-04-06 On the Origin of Species or more completely On the Origin of Species by Means of Natural Selection or the Preservation of Favoured Races in the Struggle for Life published on 24 November 1859 is a work of scientific literature by Charles Darwin which is considered to be the foundation of evolutionary biology Darwin's book introduced the scientific theory that populations evolve over the course of generations through a process of natural selection

It presented a body of evidence that the diversity of life arose by common descent through a branching pattern of evolution Darwin included evidence that he had gathered on the Beagle expedition in the 1830s and his subsequent findings from research correspondence and experimentation Various evolutionary ideas had already been proposed to explain new findings in biology There was growing support for such ideas among dissident anatomists and the general public but during the first half of the 19th century the English scientific establishment was closely tied to the Church of England while science was part of natural theology Ideas about the transmutation of species were controversial as they conflicted with the beliefs that species were unchanging parts of a designed hierarchy and that humans were unique unrelated to other animals The political and theological implications were intensely debated but transmutation was not accepted by the scientific mainstream The book was written for non specialist readers and attracted widespread interest upon its publication As Darwin was an eminent scientist his findings were taken seriously and the evidence he presented generated scientific philosophical and religious discussion The debate over the book contributed to the campaign by T H Huxley and his fellow members of the X Club to secularise science by promoting scientific naturalism

On the Origin of Species Charles Darwin, 2016-02-22

INTRODUCTION When on board H M S Beagle as naturalist I was much struck with certain facts in the distribution of the inhabitants of South America and in the geological relations of the present to the past inhabitants of that continent These facts seemed to me to throw some light on the origin of species that mystery of mysteries as it has been called by one of our greatest philosophers On my return home it occurred to me in 1837 that something might perhaps be made out on this question by patiently accumulating and reflecting on all sorts of facts which could possibly have any bearing on it After five years work I allowed myself to speculate on the subject and drew up some short notes these I enlarged in 1844 into a sketch of the conclusions which then seemed to me probable from that period to the present day I have steadily pursued the same object I hope that I may be excused for entering on these personal details as I give them to show that I have not been hasty in coming to a decision My work is now nearly finished but as it will take me two or three more years to complete it and as my health is far from strong I have been urged to publish this Abstract I have more especially been induced to do this as Mr Wallace who is now studying the natural history of the Malay archipelago has arrived at almost exactly the same general conclusions that I have on the origin of species Last year he sent to me a memoir on this subject with a request that I would forward it to Sir Charles Lyell who sent it to the Linnean Society and it is published in the third volume of the Journal of that Society Sir C Lyell and Dr Hooker who both knew of my work the latter having read my sketch of 1844 honoured me by thinking it advisable to publish with Mr Wallace s excellent memoir some brief extracts from my manuscripts I much regret that want of space prevents my having the satisfaction of acknowledging the generous assistance which I have received from very many naturalists some of them personally unknown to me I cannot however let this opportunity pass without expressing my deep obligations to Dr Hooker who for the last fifteen years has aided me in every possible way by his large stores of

knowledge and his excellent judgment In considering the Origin of Species it is quite conceivable that a naturalist reflecting on the mutual affinities of organic beings on their embryological relations their geographical distribution geological succession and other such facts might come to the conclusion that each species had not been independently created but had descended like varieties from other species Nevertheless such a conclusion even if well founded would be unsatisfactory until it could be shown how the innumerable species inhabiting this world have been modified so as to acquire that perfection of structure and coadaptation which most justly excites our admiration Naturalists continually refer to external conditions such as climate food etc as the only possible cause of variation In one very limited sense as we shall hereafter see this may be true but it is preposterous to attribute to mere external conditions the structure for instance of the woodpecker with its feet tail beak and tongue so admirably adapted to catch insects under the bark of trees In the case of the misseltoe which draws its nourishment from certain trees which has seeds that must be transported by certain birds and which has flowers with separate sexes absolutely requiring the agency of certain insects to bring pollen from one flower to the other it is equally preposterous to account for the structure of this parasite with its relations to several distinct organic beings by the effects of external conditions or of habit or of the volition of the plant itself The author of the Vestiges of Creation would I presume say that after a certain unknown number of generations some bird had given birth to a woodpecker and some plant to the misseltoe and that these had been produced perfect as we now see them but this assumption seems to me to be no explanation for it leaves the case of the coadaptations of organic beings to each other and to their physical conditions of life untouched and unexplained

The Origin of Species Charles Darwin, 2019-02-26 Discover this beautiful special edition of Charles Darwin's groundbreaking theory on human evolution When the eminent naturalist Charles Darwin returned from South America on board the HMS Beagle in 1836 he brought with him the notes and evidence that would form the basis of a world changing theory the evolution of species by a process of natural selection This theory published as *On the Origin of Species* in 1859 is the basis of modern biology and the concept of biodiversity Its publication sparked a fierce scientific religious and philosophical debate which continues to this day PATTERNS OF LIFE SPECIAL EDITIONS OF GROUNDBREAKING SCIENCE BOOKS *On the Origin of Species By Means of Natural Selection* Charles Darwin, 2024-02-12 *On the Origin of Species by Means of Natural Selection* is a seminal work written by Charles Darwin First published in 1859 this book represents a landmark in the field of biology and is considered one of the most important scientific works ever written In *On the Origin of Species* Charles Darwin presents his theory of evolution by natural selection The central idea is that species evolve over time through the differential survival and reproduction of organisms with advantageous traits Darwin provides a wealth of evidence from various scientific disciplines including paleontology embryology and biogeography to support his theory The publication of this book had profound implications for the understanding of the diversity of life on Earth and challenged prevailing scientific and religious views at the time Darwin's

work laid the foundation for modern evolutionary biology and continues to influence scientific thought to this day **The Origin of Species [Illustrated]** Charles Darwin, Jamie Iaconis, 2013-12-05 Charles Darwin's *Origin of Species* published 1859 is a pivotal work in scientific literature and arguably the pivotal work in evolutionary biology. The book's full title is *On the Origin of Species by Means of Natural Selection, or the Preservation of Favoured Races in the Struggle for Life*. It introduced the theory that populations evolve over the course of generations through a process of natural selection. It was controversial because it contradicted religious beliefs which underlay the then current theories of biology. Darwin's book was the culmination of evidence he had accumulated on the voyage of the *Beagle* in the 1830s and added to through continuing investigations and experiments since his return.

[On the Origin of Species](#) Charles Darwin, 2009-06-01 Darwin consolidated a lifetime of work in *On the Origin of Species* compiling his discoveries from the voyage of the *Beagle*, his experiments, research, and correspondence. He argues for the transmutation of species over time by the process of natural selection. His work laid the foundation of evolutionary biology though when it was published it caused tremendous religious and philosophical debates. Darwin's work is still seen by many people to oppose Christian beliefs.

Ideas about the transmutation of species were controversial as they conflicted with the beliefs that species were unchanging parts of a designed hierarchy and that humans were unique, unrelated to other animals. The political and theological implications were intensely debated, but transmutation was not accepted by the scientific mainstream.

The Origin of Species Charles Darwin, 2007-01-01 *The Origin of Species* challenged the beliefs of its time and questioned the deeply embedded religious theories. Darwin has presented his ideas about the evolution of man and
