Atomic Bomb Island Don A. Farrell,2021-01-15 Atomic Bomb Island tells the story of an elite top secret team of sailors airmen scientists technicians and engineers who

came to Tinian in the Marianas in the middle of 1945 to prepare the island for delivery of the atomic bombs then being developed in New Mexico to finalize the designs of the bombs themselves and to launch the missions that would unleash hell on Japan. Almost exactly a year before the atomic bombs were dropped, strategically important Tinian was captured by Marines because it was only 1,500 miles from Japan and its terrain afforded ideal runways from which the new B-29 bombers could pound Japan. In the months that followed, the U.S. turned virtually all of Tinian into a giant airbase with streets named after those of Manhattan Island, a Marianas city where the bombs could be assembled; the heavily laden B-29s could be launched and the Manhattan Project scientists could do their last work. Don Farrell has done this story incredible justice for the 75th anniversary. The book is a thoroughly researched, beautifully illustrated mosaic of the final phase of the Manhattan Project from the Battle of Tinian and the USS Indianapolis to Hiroshima and Nagasaki.

The Making of the Atomic Bomb
Richard Rhodes, 2012-06-12. Winner of the Pulitzer Prize, the National Book Award, and the National Book Critics Circle Award. The definitive history of nuclear weapons from the turn of the century discovery of nuclear energy to J. Robert Oppenheimer and the Manhattan Project; this epic work details the science, the people, and the sociopolitical realities that led to the development of the atomic bomb. This sweeping account begins in the 19th century with the discovery of nuclear fission and continues to World War Two and the Americans' race to beat Hitler's Nazis. That competition launched the Manhattan Project and the nearly overnight construction of a vast military industrial complex that culminated in the fateful dropping of the first bombs on Hiroshima and Nagasaki. Reading like a character-driven suspense novel, the book introduces the players in this saga of physics, politics, and human psychology from FDR and Einstein to the visionary scientists who pioneered quantum theory and the application of thermonuclear fission, including Planck, Szilard, Bohr, Oppenheimer, Fermi, Teller, Meitner, von Neumann, and Lawrence. From nuclear power's earliest foreshadowing in the work of H.G. Wells to the bright glare of Trinity at Alamogordo and the arms race of the Cold War, this dread invention forever changed the course of human history. The Making of the Atomic Bomb provides a panoramic backdrop for that story. Richard Rhodes's ability to craft compelling biographical portraits is matched only by his rigorous scholarship. Told in rich human, political, and scientific detail that any reader can follow, The Making of the Atomic Bomb is a thought-provoking and masterful work.

The Race for the Atomic Bomb Norman Ridley, 2023-04-06 On 19 December 1938 Otto Hahn working at the Kaiser Wilhelm Institute for Chemistry in Berlin conducted an experiment the results of which baffled him It took his migr collaborator Lise Meitner to explain that he had split an atom of uranium which at the time seemed to defy all known laws of physics When Neils Bohr took this news to the United States it became clear to scientists there that these results opened a completely new and for some horrifying possibility of energy production that could be used for both peaceful and military purposes Scientists in Germany France Britain and the US began to delve deeper into the implications But it was the British government that was the first to explicitly describe how the splitting of the atom might be utilized to create a practical weapon of fearsome power France by then had been occupied by the Germans and most of their nuclear scientists had fled to Britain For their part the Germans who for a time were at the very forefront of nuclear research had weakened their own scientific ranks by hounding many of their best scientists who had fled persecution under the draconian Nazi racial laws They still retained however possibly the ablest nuclear scientist of them all in Werner Heisenberg who set about developing his own program for nuclear power British scientists made extensive progress before realizing that translating their laboratory results into the vast industrial enterprise required to build a bomb was way beyond the nation's stretched resources The government agreed to hand over all the UK's research findings to America in return for a share of the spoils The United States for its part was impressed with British results and invested enormous sums of money and resources into what became known as the Manhattan Project in a concerted effort to build a bomb before the end of the war For much of the war the Soviets showed little enthusiasm for the sort of investment required to build their own bomb However with an eye to the future they established an extensive espionage network both in Britain and America Following the German surrender there was still the problem of Japan and the race continued to develop a working bomb to accelerate the end of the war both to save Allied lives and to prevent Soviet expansion into northern China and the Japanese mainland It was a race that the United States won It was also a race that ushered in a new Cold War

Deleuze, Japanese Cinema, and the Atom Bomb David Deamer, 2014-07-31 David Deamer establishes the first ever sustained encounter between Gilles Deleuze's Cinema books and post war Japanese cinema exploring how Japanese films responded to the atomic bombings of Hiroshima and Nagasaki From the early days of occupation political censorship to the social and cultural freedoms of the 1960s and beyond the book examines how images of

the nuclear event appear in post war Japanese cinema Each chapter begins by focusing upon one or more of three key Deleuzian themes image history and thought before going on to look at a selection of films from 1945 to the present day These include movies by well known directors Kurosawa Akira Shindo Kaneto Oshima Nagisa and Imamura Shohei popular and cult classics Godzilla 1954 Akira 1988 and Tetsuo 1989 contemporary genre flicks Ring 1998 Dead or Alive 1999 and Casshern 2004 the avant garde and rarely seen documentaries The author provides a series of tables to clarify the conceptual components deployed within the text establishing a unique addition to Deleuze and cinema studies **Congressional**

This very important work is a fundamental rewriting of Australian history from 1943 to 1968 It argues that after World War II Australian defence policy was premised on Joint nuclear weapons development with the United Kingdom and that while this endeavour failed it shaped domestic and foreign policy until the end of the 1950s Nuclear weapons have traditionally been seen as American and British concerns and various official histories have held that the development of rockets and atomic weapon testing were essentially British exercises But author Wayne Reynolds reveals an entirely new perspective on Australia s role in these events Australia s Bid for the Atomic Bomb examines the implications of this for major social political and security issues and developments in
