Fowler,2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathemati **Methods of Graph Decompositions** Vadim Zverovich,Pavel Skums,2024-08-06 In general terms a graph decomposition is a partition of a graph into parts satisfying some special conditions Methods of Graph Decompositions discusses some state of the art decomposition methods of graph theory which are highly instrumental when dealing with a number of fundamental concepts such as unigraphs isomorphism reconstruction conjectures k dimensional graphs degree sequences line graphs and line hypergraphs The first part of the book explores the algebraic theory of graph

decomposition whose major idea is to define a binary operation that turns the set of graphs or objects derived from graphs into an algebraic semigroup If an operation and a class of graphs are appropriately chosen then just as for integers each graph has a unique factorization or canonical decomposition into a product of prime factors The unique factorization property makes this type of decomposition especially efficient for problems associated with graph isomorphism and several such examples are described in the book Another topic is devoted to Krausz type decompositions that is special coverings of graphs by cliques that are directly associated with representation of graphs as line graphs of hypergraphs The book discusses various algorithmic and structural results associated with the existence properties and applications of such decompositions In particular it demonstrates how Krausz type decompositions are directly related to topological dimension information complexity and self similarity of graphs thus allowing to establish links between combinatorics general topology information theory and studies of complex systems The above topics are united by the role played in their development by Professor Regina Tyshkevich and the book is a tribute to her memory The book will be ideal for researchers engineers and specialists who are interested in fundamental problems of graph theory and proof techniques to tackle them **Machine Learning for Neuroscience** Chuck Easttom,2023-07-31 This book addresses the growing need for machine learning and data mining in neuroscience The book offers a basic overview of the neuroscience machine learning and the required math and programming necessary to develop reliable working models The material is presented in a easy to follow user friendly manner and is replete with fully working machine learning code Machine Learning for Neuroscience A Systematic Approach tackles the needs of neuroscience researchers and practitioners that have very little training relevant to machine learning The first section of the book provides an overview of necessary topics in order to delve into machine learning including basic linear algebra and Python programming The second section provides an overview of neuroscience and is directed to the computer science oriented readers The section covers neuroanatomy and physiology cellular neuroscience neurological disorders and computational neuroscience The third section of the book then delves into how to apply machine learning and data mining to neuroscience and provides coverage of artificial neural networks ANN clustering and anomaly detection The book contains fully working code examples with downloadable working code It also contains lab assignments and quizzes making it appropriate for use as a textbook The primary audience is neuroscience researchers who need to delve into machine learning programmers assigned neuroscience related machine learning projects and students studying methods in computational neuroscience Intelligent Computing Kohei Arai,2022-07-06 The book Intelligent Computing Proceedings of the 2022 Computing Conference is a comprehensive collection of chapters focusing on the core areas of computing and their further applications in the real world Each chapter is a paper presented at the Computing Conference 2022 held on July 14 15 2022 Computing 2022 attracted a total of 498 submissions which underwent a double blind peer review process Of those 498 submissions 179 submissions have been selected to be included in this book The goal of this conference is to give a

platform to researchers with fundamental contributions and to be a premier venue for academic and industry practitioners to share new ideas and development experiences We hope that readers find this book interesting and valuable as it provides the state of the art intelligent methods and techniques for solving real world problems We also expect that the conference and its publications will be a trigger for further related research and technology improvements in this important subject **Tactile Learning Activities in Mathematics** Julie Barnes,Jessica M.
