United States where wild pecans still grow along the region's rivers and streams and in its floodplain forests. The pecan is the only native tree nut that has been developed into a significant agricultural crop. Though native pecans continue to figure into the 280 million pound annual US crop, wild pecan trees face an uncertain future as worldwide demand centers on the larger and more lucrative improved varieties. *Pecan America* provides readers with a look at how the rising demand for pecans around the world is transforming the way this nut is grown, promoted and consumed here in the United States. Along the way Gifford explores its presence in American folk art and culture, documents the pecan industry's quest for share of stomach in a market brimming with other tree nuts, examines the pecan's surprising array of health benefits and profiles some of the fascinating people who bring this food to our tables. In the end Gifford reveals the pecan to be much more than a food but also a cultural curiosity and even a metaphor for America itself, one whose diverse nature may be its greatest quality.

*Postharvest Biology and Technology of Tropical and Subtropical Fruits* Elhadi M. Yahia, 2011-06-30 While products such as bananas, pineapples, kiwifruit and citrus have long been available to consumers in temperate zones, new fruits such as lychee, longan, carambola and mangosteen are now also entering the market. Confirmation of the health benefits of tropical and subtropical fruit may also promote consumption further. Tropical and subtropical fruits are particularly vulnerable to postharvest losses and are also transported long distances for sale. Therefore, maximising their quality postharvest is essential and there have been many recent advances in this area. Many tropical fruits are processed further into purees, juices and other value added products so quality optimisation of processed products is also important. The books cover current state of the art and emerging post harvest and processing technologies. Volume 1 contains chapters on particular production stages and issues whereas Volumes 2, 3 and 4 contain chapters focused on particular fruit. Chapters in Volume 4 review the factors affecting the quality of different tropical and subtropical fruits from mangosteen to white sapote. Important issues relevant to each product are discussed including means of maintaining quality and minimising losses postharvest, recommended storage and transport conditions and processing methods among other topics. With its distinguished editor and international team of contributors, Volume 4 of *Postharvest biology and technology of tropical and subtropical fruits* along with the other volumes in the collection are essential references both for professionals involved in the postharvest handling and processing of tropical and subtropical fruits and
