**Methodological and Biostatistical Foundations of Clinical Neuropsychology and Medical and Health Disciplines** Domenic V Cicchetti, Byron P Rourke, 2004-06-01 The goal of the second edition is to introduce the advance

undergraduate or graduate student and more seasoned research scientists in any of the allied health sciences to a wide array of methodological and biostatistical issues as they occur in the context of both published and ongoing research. Some sixty four articles published between 1992 and 2002 have been selected from the Journal of Clinical and Experimental Neuropsychology, The Clinical Neuropsychologist and Child Neuropsychology and reproduced in this volume. While building upon a working knowledge and understanding of the basic univariate data analytic techniques and the research designs to which they apply, the approach to the more complex multivariate techniques is presented primarily at a conceptual and essentially non mathematical level. While the issue of the complexity of some of the more recent and standard approaches to data analytic strategies and their important role to specific research designs is important to convey, there remains an even more fundamental issue of whether the results of correctly applied data analytic strategies make any practical or clinical sense above and beyond their having reached levels of statistical significance. These critical issues are addressed throughout various commentaries that the editors make at appropriate points in the text. The volume will appeal to advanced undergraduate and graduate students as well as clinical neuropsychologists and research scientists in any of the allied health disciplines.

Electroconvulsive Therapy in Children and Adolescents Neera Ghaziuddin, Garry Walter, 2013-10-11. This pioneering book is the first book of its kind and offers guidance about the use of ECT in youth with up to date and concise information. The editors Neera Ghaziuddin MD MRCPsych, University of Michigan, Ann Arbor, USA and Garry Walter MD PhD, University of Sydney, Australia have spearheaded the re introduction of ECT as a safe and an effective treatment option for a subgroup of children and adolescents with severe psychiatric disorders. This book offers a review of the existing literature, firsthand experience of the authors who are regarded as experts in their respective field and highly informative case descriptions. The book also offers a historical perspective explaining the reasons why ECT fell out of favor particularly among child and adolescent psychiatrists and the resulting lost opportunity to train clinicians over many decades. Starting around the 1990s there has been a revival of interest, probably due to the recognition of treatment resistance among some adolescents. The chapter about the mechanism of action of ECT describes biological mechanisms that are known to underlie mental illness. Other chapters include a discussion about stigma associated with ECT, ethical and informed consent issues, a step by step guidance about using ECT, use of anesthesia during ECT and the interaction between ECT and medications. In addition, its use in youth with general medical and neurological disorders is described. The chapter detailing side effects of the treatment dispels misinformation and indicates that ECT is a safe, painless and a highly effective procedure which is not associated with any lasting side effects. The use of ECT in the treatment of specific disorders, mood and psychotic disorders, severe self injury and catatonia is described under respective chapters using case examples. Lay readers, families and patients considering this treatment will find the question and answer subsections at the end of each chapter useful. The experience of the editors gives a unique insight to ECT, dispelling myths and stigma and guides the reader about its proper use.

Neuropsychology of Children in Africa Michael J. Boivin, Bruno Giordani, 2013-05-13 Increasingly global humanitarian efforts are focusing on improving the lives of children And among the developing world the African nations are particularly affected by extreme weather conditions devastating pandemics and armed conflict Neurocognitive science offers significant avenues toward bringing needed aid to the continent while creating a template for helping children worldwide The studies in Neuropsychology of Children in Africa clearly illustrate how the brain develops and adjusts in the face of adversity Contributors span assessment approaches and public health risk factors and represent established topics and emerging lines of research including biocultural constructs and genomic technologies Together these chapters argue for methodology that is culturally sensitive scientifically rigorous consistent and sustainable And although the focus is pediatric the book takes a lifespan approach to prevention and intervention modeling a universal framework for understanding neurocognitive development Included in the coverage Assessment of very young children in Africa in the context of HIV Psychosocial aspects of malnutrition among African children Assessment of neuropsychological outcomes in pediatric severe malaria Neurodisability screening using the Ten Questions questionnaire The neuropsychology of sickle cell disease in West African children Computerized Cognitive Rehabilitation Therapy for African children As a guide to current findings or a springboard for new studies Neuropsychology of Children in Africa is a necessary reference for researchers policymakers and diverse professionals in global aid organizations and across the discipline
