Cardiovascular Pediatric Critical Illness and Injury Derek S. Wheeler,Hector R.

Wong,Thomas P. Shanley,2009-03-01 The development of pediatric cardiac surgical programs has had a profound effect on

the specialty of pediatric critical care medicine and as a result the field of pediatric cardiac intensive care is rapidly emerging as a separate subspecialty of pediatric critical care medicine. The ability to provide care for the critically ill child with congenital heart disease clearly separates pediatric intensivists from our adult colleagues. A thorough understanding and knowledge of the unique physiology of the child with congenital heart disease are therefore absolutely crucial for anyone working in the pediatric intensive care unit. Once again we would like to dedicate this textbook to our families and to the physicians and nurses who provide steadfast care every day in pediatric intensive care units across the globe. Derek S. Wheeler, Hector R. Wong, Thomas P. Shanley. Preface to Pediatric Critical Care Medicine: Basic Science and Clinical Evidence. The field of critical care medicine is growing at a tremendous pace and tremendous advances in the understanding of critical illness have been realized in the last decade. My family has benefited from some of the technological and scientific advances made in the care of critically ill children. My son Ryan was born during my third year of medical school. By some peculiar happenstance I was nearing completion of a 4-week rotation in the newborn intensive care unit (NICU). *Critical Care of Children with Heart Disease*. Ricardo A. Munoz, Victor O. Morell, Eduardo M. da Cruz, Carol G. Vetterly, Jose Pedro da Silva, 2020-01-01. This extensively revised new edition comprehensively reviews the medical and surgical management of the acutely ill child with congenital and acquired cardiac disease. It enables the reader to gain a thorough understanding of basic and practical concepts of anatomy, pathophysiology, surgical techniques, and perioperative management in this group of patients. Extensively revised chapters cover the management of cardiac patients on extracorporeal membrane oxygenation, hemofiltration, and plasma exchange. New topics covered include the use of pharmaceuticals in cardiac intensive care, the implications of interventional cardiology in pediatric intensive care, and ventricular assist devices. Practically relevant guidelines are also included for cardiovascular nurses. *Critical Care of Children with Heart Disease* presents a thorough review of the practical concepts, available treatment techniques, and the challenges associated with managing these patients in the critical care unit. It represents a timely and valuable textbook reference for students and practicing healthcare professionals alike seeking to learn or further their understanding of the latest advances in this discipline. *Heart Failure in Children, an Issue of Heart Failure Clinics*. Jeffrey Towbin, 2010. Growing numbers of children with heart failure are reaching adulthood because of successful medical and surgical treatments and improved outcomes of congenital heart surgery. A greater understanding of the causes of heart failure in childhood may help cardiologists to develop therapeutic strategies for these children when they become adults. Also given the recent explosion of research in cardiogenetics, it is possible that discoveries in the field of pediatric cardiovascular disease may also benefit adults with heart failure. For these reasons, heart failure specialists need to be updated about pediatric heart failure. **Pediatric and Congenital Cardiac Care**. Paul R. Barach, Jeffery P. Jacobs, Steven E. Lipshultz, Peter C. Laussen, 2014-12-04. There are growing questions regarding the safety, quality, risk management, and costs of PCC teams, their training and preparedness, and their implications.
