Freedman, 2013-11-07 Preface Childhood is the topic of the ninth World Glaucoma Association Consensus There has been only sparse attention to the diagnosis and treatment of childhood glaucoma Both pediatric ophthalmologists and glaucoma specialists provide care for such children In some instances they manage these individuals alone and in others the management is shared For this consensus the participation of both groups was solicited The global faculty consisting of

leading authorities on the clinical and scientific aspects of childhood glaucoma met in Vancouver on July 16 2013 just prior to the World Glaucoma Congress to discuss the reports and refine the consensus statements As with prior meetings it was a daunting task to seek and obtain consensus on such a complicated and nuanced subject It is unclear how each of us decides how we practice and evidence to guide us often is sparse It is remarkable how few high level studies have been conducted on the management of childhood glaucoma Hence this consensus as with the others is based not only on the published literature but also on expert opinion Although consensus does not replace and is not a surrogate for scientific investigation it does provide considerable value especially when the desired evidence is lacking The goal of this consensus was to provide a foundation for diagnosing and treating childhood glaucoma and how it can be best done in clinical practice Identification of those areas for which we have little evidence and therefore the need for additional research also was a high priority We hope that this consensus report will serve as a benchmark of our understanding However this consensus report as with each of the others is intended to be just a beginning It is expected that it will be revised and improved with the emergence of new evidence Robert N Weinreb Chair     **Harley's Pediatric Ophthalmology** Robison D.
