Pediatric Oncology 1 G. Bennett Humphrey, Louis P. Dehner, Gerald B. Grindey, Ronald T. Acton, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the Specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more

Integrative Pediatric Oncology Alfred Längler, Patrick J. Mansky, Georg Seifert, 2012-12-13 This book covers a broad spectrum of complementary and alternative medicine CAM practices employed in pediatric oncology worldwide with a special focus on the methods widely used in Western countries It is a scientifically based practice oriented handbook that will meet the needs of pediatric oncologists working in medical practices and hospitals An introductory section includes a comparative overview of current CAM use in pediatric oncology in different countries Commonly used CAM methods are then discussed in a series of chapters that provide a theoretical description of the method in question followed by more practically oriented information including scientific data if applicable Special attention is paid to the issue of how to integrate each method into conventional pediatric oncology The closing parts of the book consider aspects of CAM requiring further development such as institutional research and provide a road map on establishing integrative pediatric oncology worldwide

[Childhood Cancer](#) Adolf E. Christ, Kalman Flomenhaft, 2012-12-06 The past decade has brought extraordinary gains in the outlook for children stricken with cancer Though cancer remains a leading cause of death for children and young adults more

victims of childhood cancer today will survive than will die The therapeutic advances and the optimism they instill have prompted researchers and clinicians to analyze the impact of cancer upon young patients and their families and to devise more effective intervention strategies Hope and survival juxtaposed with the continuing high mortality associated with certain forms of the illness add new challenges to management of the psychosocial aspects of cancer To respond to these challenges we need research as rigorous as that which continues to make inroads in treating the physical illness This specific concern for the needs of children suffering from cancer and their families has paralleled an increasing sensitivity on the part of the medical community and the public at large to the limitations of specialized high technology health care practices

It includes chapters in every subspecialty of pediatrics such as critical care, development, emergency medicine, and genetics. Ranging from traditional disciplines such as infectious disease and cardiology to more current disciplines such as adolescent medicine, metabolics, and genetics, this is an indispensable guide for the busy clinician who wishes to stay up to date with latest advances in the field. Through the use of summaries and bullet points, the book concisely describes the latest recommendations and guidelines in pediatrics and provides a good overview of the available technology for each subspecialty. The team of authors is made up of experienced clinicians and researchers in their respective fields. This book appeals to pediatricians, family doctors, nurses, and nurse practitioners, allied health professionals, and health researchers. Children in Pain Joseph P. Bush, Stephen W. Harkins, 2012-12-06 Our present understanding of the psychosocial aspects of pain in children is reviewed in this monograph by leading scientists and practitioners. The contributions are integrated within a developmental perspective to provide an introduction to the conceptual and methodological tools necessary for comprehension of new work in the field. This volume offers a survey of major new developments in the area of pediatric pain and points out the directions in which clinical work and conceptualization are moving. Children in Pain argues consistently and persuasively that both models of pain assessment, intervention techniques, and research designs must demonstrate a sophisticated appreciation for developmental considerations. Topics explored include assessment of pediatric pain, coping and adaptation in children's pain, developmental issues among infants and toddlers and among preschool and school age children, as well as among adolescents, recurrent abdominal pain, burn injury and treatment, chronic and recurrent pain in hemophilia, juvenile rheumatoid arthritis, and sickle cell disease, developmental aspects of the biobehavioral treatment of migraine in childhood, and helping children cope with painful medical procedures.
