Pediatrics A Problem Based Review:

Pediatric Anesthesia: A Problem-Based Learning Approach Kirk Lalwani, Ira Todd Cohen, Ellen Y. Choi, Vidya T.

Raman, 2018-09-17 Linking existing knowledge to new knowledge by presenting it in the form of a case or a problem is a popular and effective educational approach resulting in better retention of the knowledge and improved ability to apply that knowledge to solve real problems. This problem based learning PBL method was introduced into medical education at McMaster University in Ontario Canada in 1969. Since then it has been widely incorporated into secondary undergraduate and graduate education in a variety of disciplines worldwide. This new volume for the Anesthesiology Problem Based Learning series reviews pediatric anesthesia utilizing the PBL approach. Each chapter deals with conditions and problems in pediatric anesthesia practice presented as a case stem with questions to encourage critical thinking followed by an evidence based discussion and multiple choice questions for self assessment. Cases were carefully selected to present a broad systems based tour of commonly encountered clinical cases in pediatric anesthesia. The book can be used to review an upcoming clinical case or as a PBL tool. The Stem Case and Key Questions and Discussion sections can serve as the basis for interactive learning experiences for study groups or as a broad yet in depth clinical review of the subspecialty for the individual learner. Self assessment questions can be used as a measure of knowledge acquisition or simply as a question bank to prepare for examinations.

Pediatrics Fredric David Burg, Victor C. Vaughan, Kathleen G. Nelson, 2001 This handy resource uses a problem solving approach to offer a comprehensive review of pediatrics that enables readers to assess their knowledge of current practice. Organized by age of patient this review presents case studies that represent over 200 problems facing infants, children and adolescents.

Case Based Reviews in Pediatric Pulmonology Sushil K Kabra, Rakesh Lodha, Jhuma Sankar, 2017-07-17

Case Based Reviews in Pediatric Pulmonology is a comprehensive collection of reviews covering all aspects of paediatric pulmonology from disorders of the upper respiratory tract to pulmonary diseases in the paediatric intensive care unit. The book is divided into 46 chapters across nine sections beginning with disorders of the upper respiratory tract and congenital disorders of the reparatory tract such as laryngomalacia and diaphragmatic hernia. Further sections cover wheezing disorders, respiratory tract infections, suppurative and interstitial lung diseases and pleural diseases. The final two sections focus on paediatric pulmonary diseases requiring intensive care and miscellaneous respiratory disorders. Each chapter in *Case Based Reviews in Pediatric Pulmonology* begins with a case scenario and provides guidance on the assessment and appropriate treatment of the relevant disorder followed by a key points summary. Key Points Comprehensive collection of reviews covering a wide range of paediatric pulmonary disorders. Each chapter presents a case scenario along with assessment and treatment of each disorder. Key points summary at end of each chapter.

Practical Paediatric Problems in Primary Care Michael J Bannon, Yvonne Carter OBE, 2007-04-26

General practitioners (GPs) and other members of the Primary Health Care Team (PHCT) play a crucial role in the provision of health care for children. At least 25% of GP consultations are with children and many of the problems encountered are specific to this population group. However, children do not represent a homogeneous population and several ages of childhood are recognised, each with its unique set of illnesses and problems: the neonate, infant, pre-school child, school age child and the adolescent. Furthermore, both the childhood population and their illnesses change with time; new illnesses such as HIV have appeared and others not seen for many years such as rickets, tuberculosis and congenital rubella syndrome have returned. Thus, a comprehensive knowledge of the varied aspects of child health is needed: recognition of the acutely ill child, developmental surveillance, immunisation, treatment of chronic illness and psycho-social issues. GPs are also increasingly involved in influencing configuration and the commissioning of services at a local level. This textbook provides practical guidance for GPs, GP registrars, practice nurses and health visitors dealing with child health in the 21st century. It undertakes a focused, problem-orientated approach based on the more common childhood problems encountered by GPs. Each chapter includes the essential background theory, but the emphasis is on making the clinical approach relevant and sensitive to primary care. Solutions to clinical scenarios are provided based upon current best available evidence. Site and system specific

chapters are combined with sections looking at wider issues such as ethics and law multicultural issues and immunisation
