Peep Game Adalberto McFarlane, 2009-05. This novel *Children of Silicon* explores a slice of your far future. If you had to live and work in this age with robots, how would you feel? There is no answer until a multitude of other questions are asked and answered right. How safe and how intelligent they are come to mind immediately among many others. However, if at this future time a decades-long study had been completed called *The Model of the Human Mind* and if a conscious electronic mind had been forged from their Human Brain Model, not a software-driven computer mind and packaged in a human-like frame, assuming it was safe and of equal intelligence, would this help your comfort level? Would you feel more comfy if you knew it had fully functional genitalia and a full range of emotional responses, or would you rather it didn't have any of either? Would you care if it vied for your girl/boyfriend or job or loan or home site? If so, what hierarchy, limits, and restrictions would you impose on this new human? Perhaps your future kin will opt to make them aids or slaves. Do you suppose some of these limits could affect negatively the desired result of building a compassionate human companion, or might it become too alien for you to empathize with, i.e., just another mechanical robot or machine? If you have thought deeply about these questions, you will realize the difficulty your future generations will experience when they face the most sensational and transitional of all future events: the face-off between the two human minds: the organic biological human mind and the electronic silicon chip human mind.
