experience with suppression of academic speech and obstacles to the pursuit of academic quality Using his own tumultuous experience as a starting point Hamilton explores how significant efforts to create an autonomous space for academic speech within the university over the past 125 years have been thwarted Hamilton charges that a fundamentalist academic left in some humanities and social science faculties views the exercise of standards of academic quality and merit based performance evaluations as tools of oppression and bigotry Academic zealots ferret out and oppose hidden structures of so called oppression in our Eurocentric culture Any faculty member overtly supporting academic quality is thus suspected of bigotry and subject to investigations The opening portion of the book locates similarities with the religious fundamentalism of the nineteenth century in waves of zealotry in American higher education The first part covers student activism in the 1960s through the emergence of a radical academic left in the early 1990s The second part examines the meaning of academic freedom and the protection of expression that should be secured The third and final portion shows how targets of the coercive tactics of the zealots in any period of zealotry can and have been effectively rebuked and ultimately overcome Neil Hamilton s book will generate controversy particularly the chapters that inquire into the current wave of academic suppression Hamilton warns that history instructs that it can happen here This candid look into the politics of higher education will be gripping reading for all those concerned with the future of education professors administrators students and parents There has been a growing literature on this subject but none cover the legal political aspects of political correctness with such precision

**Technology Communication** Susanna Hornig Priest, 2010-07-14 In the academic world the term science communication refers both to a set of professions such as science journalism and public information work and to an interdisciplinary scholarly research specialization Much of this research is aimed at improving our understanding of the best ways to communicate complex information especially to people who are not scientists Science communication specialists are concerned with giving people useful information about health environment and technology as well as science itself In order to do this we also need to improve our understanding of how people think form opinions and process information Additionally professional practitioners in science communication are engaged in strategic and ethical decisions every day such as How should reporters cover the issue of climate change Should the views of scientists who do not believe that climate change has been caused by human activity be included alongside the views of those who do in order to give a balanced story or does this mislead the public into thinking that both of these positions are equally accepted within the scientific community The Encyclopedia of Science and Technology Communication provides information on the entire range of interrelated issues in this interdisciplinary field in one place along with clear suggestions on where to begin the search for more Geared towards undergraduate and graduate students in journalism communication mass communication and media studies as well as towards working journalists public information officers and public relations specialists this encyclopedia introduces this vast fascinating field while challenging the reader to question assumptions inherent in communication across disciplinary boundaries Key Themes Associations and Organizations Audiences Opinions and Effects Challenges Issues and Controversies Changing Awareness Opinion And Behavior Critical Influences and Events Global and International Aspects Government
