Science World Structures Materials:

Assessment of Materials in Ageing Offshore Structures John V. Sharp, John Wintle, 2025-04-17 This book provides essential knowledge and techniques required to assess materials for extending the life of ageing offshore structures used for energy production. With over half of these structures currently in a life extension phase, the effects of ageing and degradation are at the forefront of the industry. The book presents the changes in industry practices and key technological advancements that have shaped the field since its inception. It reviews the original properties of the materials employed in offshore structures and provides a deep understanding of their behaviour as they age over time. The relevant degradation processes are investigated for offshore structural materials such as steel welds, bolted joints, concrete grout, reinforcement, pre-tensioning and non-metallic materials including coatings and composites. Materials engineers will be equipped with the necessary tools in this book to evaluate materials in existing ageing structures. The book goes beyond theoretical knowledge, providing practical insights into assessing the performance of materials in ageing structures. With a focus on ensuring the efficient and safe continued use of existing infrastructure, engineers will find useful guidance to inform decision making and facilitate the assessment process. The book brings together a wide range of research findings relevant to the topic and offers an updated summary of material assessment techniques that are largely difficult or even impossible to access publicly. This book is an invaluable resource for practising materials engineers, offshore engineering professionals or materials engineering students.

Transformations Selected Works of G.B. Olson on Materials, Microstructure, and Design C.E. Campbell, M.V. Manuel, W. Xiong, 2017-10-01 ASM International and The Minerals Metals and Materials Society TMS have collaborated to present a collection of the selected works of Dr Greg B Olson in honor of his 70th birthday in 2017. This collection highlights his influential contributions to the understanding of martensite transformations and the development and application of a systems design approach to materials. Part I: Martensite with an Introduction by Sir Harry Bhadeshia emphasizes Dr Olson's work to develop a dislocation theory for martensite transformations to improve the understanding of the statistical nature of martensite nucleation and to expand use of quantitative microscopy to characterize phase transformations. Part II: Materials Design with an Introduction by Dr Charles Kuehmann focuses on the application of a systems design approach to materials and the development of integrated computational design curriculum for undergraduate education. Part II includes several examples of the systems design approach to a variety of applications. The papers chosen for this collection were selected by the editors with input from Dr Olson.
