L'évolution des idées en géologie Bernard Balan, 2011 Alors que l interet primordial pour la Terre notre demeure s est d abord traduit par des speculations mythiques et philosophiques sur l origine du monde dont elle occupait le centre la rencontre au XVIIIe siecle entre l Art des Mines et l Histoire Naturelle des Mineraux a laquelle se rattachait la Geographie Physique a fait du globe terrestre envisage dans sa profondeur un nouveau domaine de recherche positive Mais entre ce moment initial et son acces recent au rang de science la Geologie a connu une longue periode de gestation au cours de laquelle l interpretation des resultats obtenus sur le terrain nous fait assister a une confrontation permanente entre les cosmogonies imaginaires avec leurs sequelles et la volonte de parvenir a l explication objective des phenomenes observes

Les Sciences de la terre aux XVIIe et XVIIIe siècles Gabriel Gohau, 2014-04-01 Chacun sait que la science n'a eu début qu'au XVIIe siècle lorsque Kepler Galilée et Descartes notamment ont couvert les bases de l'astronomie et de la mécanique. Pourtant les sciences de la vie et de la terre ne suivent pas le mouvement. Malgré les efforts d'exploration et de classification du monde vivant et du domaine minéral, ces disciplines ne prendront leur essor qu'au début du XIXe siècle. Ce travail, comme celui de Guyot, ne se situe donc pas entre deux révolutions scientifiques. Notre souhait final est que le lecteur prenne assez de goût pour ces lectures pour les prolonger en allant aux auteurs cités dans les bibliographies chez les bouquinistes ou dans les éditions modernes qui se multiplient et qui, sans avoir le charme des livres anciens, sont un moyen commode et bon marché d'accéder au fonds de notre littérature scientifique des siècles passés. **New Frontiers in Tectonic Research** Uri Schattner, 2011-08-09 Ocean closure involves a variety of converging tectonic processes that reshape shrinking basins, their adjacent margins and the entire earth underneath. Following continental breakup, margin formation and sediment accumulation, tectonics normally relaxes and the margins become passive for millions of years. However, when final convergence is at the gate, the passive days of any ocean and its margins are over or soon will be. The fate of the Mediterranean and Persian Gulf is seemingly known beforehand as they are nestled in the midst of Africa Arabia plate convergence with Eurasia. Over millions of years through the Cenozoic era, they progressively shriveled, leaving only a glimpse of the Tethys Ocean. Eventually, the basins will adhere to the Alpine Himalaya orogen and dissipate. This book focuses on a unique stage in the ocean closure process when significant convergence already induced major deformations, yet the interplate basins and margins still record the geological history.
