The Mind As a Scientific Object Christina E. Erneling, David M. Johnson, 2005-01-13 What holds together the various fields which considered together are supposed to constitute the general intellectual discipline that people now call cognitive science Some theorists identify the common subject matter as the mind but scientists have not been able to agree on any single satisfactory answer to the question of what the mind is This book argues that all cognitive sciences are not equal and that rather only neurophysiology and cultural psychology are suited to account for the mind's ontology

Explanation and Integration in Mind and Brain Science David M. Kaplan, 2017-12-01 This collection brings together a set of new papers that advance the debate concerning the nature of explanation in mind and brain science and help to clarify the prospects for bonafide integration across these fields Long a topic of debate among philosophers and scientists alike there is growing appreciation that understanding the complex relationship between the psychological sciences and the neurosciences especially how their respective explanatory frameworks interrelate is of fundamental importance for achieving progress across these scientific domains Traditional philosophical discussions tend to construe the relationship between them in stark terms either they are related in terms of complete independence i.e. autonomy or complete dependence i.e. reduction leaving little room for more interesting relations such as that of mutually beneficial interaction or integration A unifying thread across the diverse set of contributions to this volume is the rejection of the assumption that no stable middle ground exists between these two extremes and common embrace of the idea that these sciences are partially dependent on or constrained by one another By addressing whether the explanatory patterns employed across these domains are similar or different in kind and to what extent they inform and constrain each another this volume helps to deepen our understanding of the prospects for successfully integrating mind and brain science

Philosophy of Mind John Heil, 1998 This comprehensive textbook written by a leading author in the field provides a survey of mainstream conceptions of the nature of mind accessible to readers with little or no background in philosophy Included are the dualist behaviourist and functionalist accounts of the nature of mind along with a critical assessment of recent trends in the subject The problem of consciousness widely thought to be the chief roadblock to our understanding of the mind is addressed throughout the book and there is also material to interest those with a professional interest in the topic philosophers psychologists and neuroscientists as well as the general reader Unique features of *Philosophy of Mind* provides a comprehensive survey of basic concepts and major theories contains many lucid examples to support ideas cites key literature in annotated suggested reading and a full

bibliography contains a full index including the location of key terms and concepts Matters of the Mind William Lyons,2020-11-25 This book presents a popular and authoritative account of the dramatically different ways in which philosophers have thought about the mind over the last hundred years It explores the effect of the major turning points in recent western philosophy as well as the influence of the leading figures *Mind, Morality, and Explanation* Frank Jackson,Philip Pettit,Michael Smith,2004-02-19 Frank Jackson Philip Pettit and Michael Smith have been at the forefront of philosophy in Australia for much of the last two decades and their collaborative work has had widespread influence throughout the world *Mind Morality and Explanation* collects the best of that work in a single volume showcasing their seminal contributions to philosophical psychology the theory of psychological and social explanation moral theory and moral psychology **Intersensory Origin of Mind** Thorne Shipley,2013-02-01 In *Intersensory Origin of Mind* Thorne Shipley proposes a fundamental revision of the core of modern psychology With a serious respect for the history of science Shipley shows the profound limits of linear mechanistic and naively reductionistic accounts of the mind and proposes instead a sensory rationalist position which builds on the principles of emergent evolution Combining several diverse perspectives from the physiological optics of Helmholtz the perceptual science of Kohler the visual electrophysiology of Hubel Wiesel to the theories of Dewey Polanyi Cassirer Chomsky and Piaget *Intersensory Origin of Mind* is an ambitious synthesis of sensory science It will need to be read by anyone with an interest in philosophical psychology the nature of human consciousness and the origin of mind Mind and Common Sense Radu J. Bogdan,1991-07-26 In this volume a variety of positions on common sense psychology from critical to supportive from exegetical to speculative are represented Mind, Self and Interiority Thomas Duddy,2017-07-05 The central claim of this book is that such purportedly Cartesian concepts as privacy interiority and self unity are compatible with a materialist philosophy of mind
