Scientific Information In Wartime An Allied German Rivalry 1939 1945:

Scientific Information in Wartime Pamela Spence Richards, 1994-06-14 This book describes how the growing awareness of the strategic importance of science in the 1930s caused the Allied and German leadership to build scientific information supply systems that survived into the postwar era Using archival materials from five countries Richards traces the successes and failures of these early scientific intelligence agencies She focuses on the OSS unit supplying copy for the US government's wartime program to reprint current German scientific journals She describes as well the methods used by the OSS to spirit individual journal issues from inside the Reich to microfilm squads on Germany's periphery and gives special attention to the Allied quest for information about the mythical German atomic bomb Richards also describes the supply system set up by the Nazi government and how its increasing desperation for Allied scientific news led in the last year of the war to a submarine landing of Abwehr agents on the U S coast to microfilm periodicals at the New York Public Library The final chapter of her book looks at how the wartime experience with scientific information influenced postwar patterns of scientific documentation and librarianship in each country

America's Information Wars Colin B. Burke, 2018-03-06 This book narrates the development of science sci tech and intelligence information systems and technologies in the United States from the beginning of World War II to the second decade of our century The story ranges from a description of the information systems and machines of the 1940s created at Wild Bill Donovan's predecessors of the Central Intelligence Agency to the rise of a huge international science information industry and to the 1990's Open Access Open Culture reformers reactions to the commercialization of science information Necessarily there is much about the people cultures and politics that shaped the methods systems machines and protests The reason for that is simple The histories of technologies and methods are human histories Science information's many lives were shaped by idiosyncrasies and chance as well as by social economic political and technical forces The varied motives personalities and

beliefs of unique and extraordinary people fashioned science information's past. The important players ranged from a gentleman scholar who led the Office of Strategic Services information work to an ill-fated Hollywood movie director to life mavericks like the science information legend Eugene Garfield to international financial wheeler-dealers such as Robert Maxwell and to youthful ultra-liberal ideologically-driven Silicon Valley internet millionaires. However, although there are no determining laws of information history, social, political, legal, and economic factors were important. After 1940, science information's tools and policies as well as America's universities were being molded by the nation's wealth, its role in international affairs, the stand-off between left and right politics, and by the intensifying conflict between Soviet and Western interests.

The Oxford Handbook of World War II G. Kurt Piehler, Jonathan A. Grant, 2023. World War II dramatically transformed human life and society, resulting in the deaths of 100 million people and shaping the worldview and psyches of generations. The Oxford Handbook of World War II broadens traditional narratives of the war and in the process changes our understanding of this epic conflict. Spanning the rise and fall of the Versailles system to the postwar reintegration of veterans and the eventual commemoration of the conflict and its victims, The Oxford Handbook of World War II marks a landmark contribution to the historical literature of war.

British Exploitation of German Science and Technology, 1943-1949 Charlie Hall, 2019-01-16. At the end of the Second World War, Germany lay at the mercy of its occupiers, all of whom launched programmes of scientific and technological exploitation. Each occupying nation sought to bolster their own armories and industries with the spoils of war, and Britain was no exception. Shrouded in secrecy yet directed at the top levels of government and driven by ingenuity from across the civil service and armed forces, Britain made exploitation a key priority. By examining factories and laboratories, confiscating prototypes and blueprints, and interrogating and even recruiting German experts, Britain sought to utilise the innovations of the last war to prepare for the next. This ground-breaking book tells the full story of British exploitation for the first time, sheds new light on the legacies of the Second World War, and contributes to histories of intelligence, science, warfare, and power in the midst of the twentieth century.

The Story of the Defense Technical Information Center Lane E. Wallace, 1995. **Historical Studies in Information Science** Trudi Bellardo Hahn, Michael Keeble Buckland, 1998. History of Humanity UNESCO, 2008-12-31. This is the seventh and final volume in this comprehensive guide to the history of world cultures throughout historical times.

European Modernism and the Information Society W. Boyd Rayward, 2008. Uniting a team of international and interdisciplinary scholars, this volume considers the views of early twentieth-century European thinkers on the creation, dissemination, and management of publicly available information. *European Modernism and the Information Society* will interest all who are curious about the creation of

a modern networked information society *The Early Information Society* Alistair Black, Dave Muddiman, 2016-03-23

Whether termed the network society the knowledge society or the information society it is widely accepted that a new age has dawned unveiled by powerful computer and communication technologies Yet for millennia humans have been recording knowledge and culture engaging in the dissemination and preservation of information In *The Early Information Society* the authors argue for an earlier incarnation of the information age focusing upon the period 1900 1960 In support of this they examine the history and traditions in Britain of two separate but related information rich occupations information management and information science repositioning their origins before the age of the computer and identifying the forces driving their early development *The Early Information Society* offers an historical account which questions the novelty of the current information society It will be essential reading for students researchers and practitioners in the library and information science field and for sociologists and historians interested in the information society
