Experimental and Theoretical Study of Low-temperature Internal Friction in Copper Victor Kenneth Paré, 1958 An Investigation of Low Temperature Internal Friction in Metals Hollis Leland Caswell, 1957

Jozef IJsewijn. Humanism in the Low Countries Jozef IJsewijn, 2015-09-23 Professor Jozef IJsewijn's most relevant essays collected in one volume Jozef IJsewijn Humanism in the Low Countries contains twenty one essays written by the late Professor Jozef IJsewijn during the period 1966-1996 All essays were selected by his pupil Professor Gilbert Tournoy who collaborated with him since the foundation of the Seminarium Philologiae Humanisticae in 1966 until his untimely death in 1998 They are now published in one volume in homage to the most brilliant scholar in the field of Neo Latin Studies of the twentieth century A number of contributions focus on the life and or work of a single humanist from the Netherlands others have a more general nature and deal with the very beginning and the later blossoming of Neo Latin literature in the Low Countries or with the relationship between humanism in the Low Countries and in other European countries Hidden in a less known journal or a Festschrift for a colleague these studies are nowadays not always easy to find This volume brings the most relevant essays of IJsewijn together and aims to contribute to the research and study of humanism and Neo Latin literature in the Low Countries

Low-Dimensional Systems Tobias Brandes, 2008-01-11 Experimental progress over the past few years has made it possible to test a number of fundamental physical concepts related to the motion of electrons in low dimensions The production and experimental control of novel structures with typical sizes in the sub micrometer regime has now become possible In particular semiconductors are widely used in order to confine the motion of electrons in two dimensional heterostructures The quantum Hall effect was one of the first highlights of the new physics that is revealed by this confinement In a further step of the technological development in semiconductor heterostructures other artificial devices such as quasi one dimensional quantum wires and quantum dots artificial atoms have also been produced These structures again differ very markedly from three and two dimensional systems especially in relation to the transport of electrons and the interaction with light Although the technological advances and the experimental skills connected with these new structures are progressing extremely fast our theoretical understanding of the physical effects such as the quantum Hall effect is still at a very rudimentary level In low dimensional structures the interaction of electrons with one another and with other degrees of freedom such as lattice vibrations or light gives rise to new phenomena that are very different from those familiar in the bulk material The theoretical formulation of the electronic

transport properties of small devices may be considered well established provided interaction processes are neglected
