**Young People's Images of Science** Rosalind Driver,John Leach,Robin Millar,Phil Scott,1996-01-16 What ideas about science do school students form as a result of their experiences in and out of school How might science teaching in schools

develop a more scientifically literate society How do school students understand disputes about scientific issues including those which have social significance such as the irradiation of food There have been calls in the UK and elsewhere for a greater public understanding of science underpinned by amongst other things school science education However the relationship between school science scientific literacy and the public understanding of science remains controversial In this book the authors argue that an understanding of science goes beyond learning the facts laws and theories of science and that it involves understanding the nature of scientific knowledge itself and the relationships between science and society Results of a major study into the understanding of these issues by school students aged 9 to 16 are described These results suggest that the success of the school science curriculum in promoting this kind of understanding is at best limited The book concludes by discussing ways in which the school science curriculum could be adapted to better equip students as future citizens in our modern scientific and technological society It will be particularly relevant to science teachers advisers and inspectors teacher educators and curriculum planners

*Scientific Publishing* Hans Roosendaal, Kasia Zalewska-Kurek, Peter Geurts, Eberhard Hilf, 2010-01-20 *Scientific Publishing* addresses the issue of business models in scientific publishing and how these relate to the research process e.g. support or inhibit this process. The researcher is taken as the starting point for the considerations to arrive at a comprehensive description of the publishing process as an integral part of the research process. The properties of different business models are tested against this description, allowing an analysis of the advantages and disadvantages of these models in supporting the research process. Examines business models in scientific publishing and how these relate to the research process i.e. support or inhibit the process. The researcher is taken as the starting point to provide a comprehensive description of the publishing process as an integral part of the research process. The various scenarios for scientific publishing are discussed and the consequences for stakeholders such as Higher Education Institutions and Libraries. *The Paradox of Scientific Authority* Wiebe E. Bijker, Roland Bal, Ruud Hendriks, 2009. Assessing the influence of scientific advice in societies that increasingly question scientific authority and expertise. Today scientific advice is asked for and given on questions ranging from stem cell research to genetically modified food. And yet it often seems that the more urgently scientific advice is solicited the more vigorously scientific authority is questioned by policy makers, stakeholders and citizens. This book examines a paradox: how scientific advice can be influential in society even when the status of science and scientists seems to be at a low ebb. The authors do this by means of an ethnographic study of the creation of scientific authority at one of the key sites for the interaction of science policy and society: the scientific advisory committee. *The Paradox of Scientific Authority* offers a detailed analysis of the inner workings of the influential Health Council of the Netherlands, the equivalent of the National Academy of Science in the United States, examining its societal role as well as its internal functioning and using the findings to build a theory of scientific advising. The question of scientific authority has political as well as scholarly relevance. Democratic political institutions largely developed in the nineteenth century lack the institutional means to address the twenty-first century's pervasively scientific and technological culture and science and technology studies (STS) grapples with the central question of how to understand the authority of science while recognizing its socially constructed nature.

Having done this, it then goes on to provide a toolbox of commercial materials to enable better control of external R&D projects. It consists of two main Parts. Part I

Buying Research Services this provides an up to date briefing on contract R D practices procedures and pitfalls It includes 70 learning points which highlight issues particularly important to companies buying in R D services Part II Contract Research Toolbox of template contract and contract management documents including instructions for use these materials are subtly tailored to the commercial interests of the knowledge buyer and form a contracting system in their own right They may also be used to benchmark existing company practices and procedures Buying in R D services is undoubtedly the way of the future and a core management competence across all industrial sectors The Outsourcing R D Toolkit will stop you from being left behind
