costs and low capabilities of computers a lone programmer could develop a full and complete game However in the late 80s and 90s ever increasing computer processing power and heightened expectations from gamers made it difficult for a single person to produce a mainstream console or PC game The average cost of producing a triple A video game slowly rose from US 1 4 million in 2000 to over 5 million in 2006 then to over 20 million by 2010 citation needed Mainstream commercial PC and console games are generally developed in phases first in pre production pitches prototypes and game design documents are written if the idea is approved and the developer receives funding then full scale development begins The development of a complete game usually involves a team of 20 100 individuals with various responsibilities including designers artists programmers and testers
