Sea-Level Rise and Coastal Subsidence: Causes, Consequences, and Strategies J.D. Milliman, B.U. Haq, 2013-03-09

Greenhouse induced climate warming increasingly appears to be a reality and the warming climate will be accompanied by an accelerated sea level rise as much as 60 100 cm over the next century What is commonly absent in the discussion of rising sea level however is the role played by the subsidence of low lying coastal areas which can have a far greater local effect than the eustatic rise of the sea The combined sea level rise and land subsidence will almost certainly make the greatest impact on coastal societies in the densely populated regions of southern Asia but its effects will be felt globally This volume explores the concepts of sea level rise and coastal subsidence both natural and anthropogenically accelerated in the form of a series of case studies in such diverse locations as Bangkok Bangladesh Venice and the Niger and Mississippi deltas as well as a discussion of the economic engineering and policy responses that must be considered if the effects of local sea level rise are to be mitigated

Coastal Zone Management Imperative for Maritime Developing Nations B.U. Haq, Gunnar

Kullenberg, Jan H. Stel, 2013-03-09 Anthropogenic transformation of the coastal zone continues at a steady pace especially in the developing maritime countries where coastal resources are often crucial to national economies However exploitation of these resources is often indiscriminate ill planned or carried out without adequate scientific knowledge This leads to rapid resource depletion and often irreversible environmental degradation The 1992 Rio de Janeiro UN Conference on Environment and Development recognized the expediency of an integrated and sustainable use of all coastal resources functions and services grounded on sound scientific data The present volume is based on the 1994 international workshop Integrated Coastal Zone Management and brings together contributions by leading specialists both on basic concepts and on applications of coastal management The work is divided into six parts dealing with the conceptual framework of ICZM regional and global aspects of coastal management environmental assessment in ICZM capacity building and technology transfer monitoring and environmental analysis and case studies and status of ICZM plans The book also incorporates an interactive ICZM planning module COSMO which can be of use in designing a management plan for a coast Attention is also given to long term environmental effects of present day actions It is hoped that COSMO will prove an additional learning tool for ICZM practitioners and enhance the value of the book This work is intended to give a broad coverage of conceptual and technical aspects of ICZM and will be of use to operational executives as well as students of ICZM environmental economists policy makers and senior managers in the international development agencies and governmental and non governmental organizations It can be recommended as a textbook and as a reference work

Understanding Sea-level Rise and Variability John A. Church, Philip L. Woodworth, Thorkild Aarup, W. Stanley Wilson, 2010-12-01 Understanding Sea Level Rise and Variability identifies the major impacts of sea level rise presents up to date assessments of past sea level change thoroughly explores all of the factors contributing to sea level rise and explores how sea level extreme events might change It identifies

what is known in each area and what research and observations are required to reduce the uncertainties in our understanding of sea level rise so that more reliable future projections can be made A synthesis of findings provides a concise summary of past present and future sea level rise and its impacts on society Key Features Book includes contributions from a range of international sea level experts Multidisciplinary Four color throughout Describes the limits of our understanding of this crucial issue as well as pointing to directions for future research The book is for everyone interested in sea level rise and its impacts including policy makers research funders scientists students coastal managers and engineers Additional resources for this book can be found at <http://www.wiley.com/go/church/sealevel> **Global Coastal**

Change Ivan Valiela, 2009-03-12 Global Coastal Change provides a comprehensive overview of the environmental factors changing the marine systems of the world including atmospheric changes sea level rise alterations in freshwater and sediment use and transport toxins overfishing alien species and eutrophication Includes case studies providing real world examples detailed reviews of the evidence of changes and possible solutions Brings together a wealth of important information about our changing marine environments An invaluable reference for upper level undergraduates graduates and professionals interested in marine environmental science *Environmental Research at the Leading Edge* Alfred B.

Gore, 2007 The environment is considered the surroundings in which an organism operates including air water land natural resources flora fauna humans and their interrelation It is this environment which is both so valuable on the one hand and so endangered on the other And it is people who are by and large ruining the environment both for themselves and for all other organisms This book reviews the latest research in this field which is vital for everyone **Coastal Environments** K. S.

Jayappa, A. C. Narayana, 2013-12-30 Coastal Environments Problems and Perspectives display the impact of natural forces and processes on man and also the impact of man on the coastal environment The exploitation of natural mineral resources navigation and recreation activities are an integral part of the problems and perspectives of coastal environments This volume highlights various processes particularly sediment transport coastal erosion and its management landform evolution and resources of the coastal region The case studies are presented under each section The availability of comprehensive basic scientific data is vital for effective coastal zone management There are sixteen papers together on coastal resources coastal landforms coastal erosion sediment transport and dredging and all these add the scientific information for coastal zone management The last section of the book comprises the papers on application of remote sensing in environmental studies and two assorted papers on surface run off and flora of Gondwanaland The causes for coastal erosion the present scenario of erosion along Kerala and Karnataka coasts and the mitigation procedures have been explained in this book The utility of seawalls and other protection structures in arresting coastal erosion has been discussed and debated in detail

Coastal Conservation and Management J. Pat Doody, 2012-12-06 Coastal Conservation and Management provides the reader with a synthesis of the range and variation of the main coastal formations and includes practical guidance on their

management The book discusses all the main coastal habitats of importance for nature conservation saltmarsh shingle sand dune and seacliff as well as combinations of these habitats estuaries and other coastal wetlands It offers a comprehensive picture of both the soft sedimentary formations and those which are more resilient While these habitats have all been covered elsewhere in the literature no single volume gives such a wide ranging account An attempt is made throughout to provide the reader with a basic understanding of the importance and range of variation of each habitat and coastal ecosystem The principal issues are discussed and the key management options identified Some prescriptive suggestions are made though for the most part the reader is left to ponder the issues and their possible solutions *The Mekong River Basin* Hong Quan Nguyen, Heiko Apel, Quang Bao Le, Minh Tu Nguyen, Venkataramana Sridhar, 2024-04-22 The Mekong River Basin Ecohydrological Complexity from Catchment to Coast Volume Three presents real facts data and predictions for quantifying human induced changes throughout the Mekong watershed including its estuaries and coasts and proposes solutions to decrease or mitigate the negative effect and enable sustainable development This is the first work to link socio ecological interaction study over the whole Mekong River basin through the lens of ecohydrology Each chapter is written by a leading expert with coverage on climate change groundwater land use flooding drought biodiversity and anthropological issues Human activities are enormous in the whole watershed and are still increasing throughout the catchment with severe negative impacts on natural resources are emerging Among these activities hydropower dams especially a series of 11 dams in China are the most critical as they generate massive changes throughout the system including in the delta and to the livelihoods of millions of people and they threaten sustainability Presents an extensive collection of eco hydrological changes in the river basin driven by both nature and anthropological factors Provides state of the art modeling data analysis methodologies for complex socio ecological complexity applied in the Mekong river basin Includes specific cases of ecohydrology in the river basin especially from the Mekong delta **Climate Change and Food Security in South Asia** Rattan Lal, Mannava VK Sivakumar, S.M.A. Faiz, A.H.M. Mustafizur Rahman, Khandakar R. Islam, 2010-10-17 This book addresses an important topic of food security in South Asia with specific reference to climate change Of the 1 billion food insecure people in the world more than 30% are in South Asia The problem of food insecurity may be exacerbated by the projected climate change especially because of the water scarcity caused by rapid melting of the glaciers in the Himalayas and increase in variability in monsoonal rains and frequency of extreme events Furthermore large populations of Bangladesh and other coastal regions may be displaced by sea level rise Thus this volume addresses recommended land use and soil water crop vegetation management practices which would enable land managers to adapt to climate disruption by enhancing soil ecosystem social resilience In addition to biophysical factors this book also addresses the issues related to human dimensions including social ethnical and political considerations Climate Change Modeling Methodology Philip J. Rasch, 2012-12-09 The Earth s average temperature has risen by 1.4 F over the past century and computer models project

that it will rise much more over the next hundred years with significant impacts on weather climate and human society Many climate scientists attribute these increases to the build up of greenhouse gases produced by the burning of fossil fuels and to the anthropogenic production of short lived climate pollutants Climate Change Modeling Methodologies Selected Entries from the Encyclopaedia of Sustainability Science and Technology provides readers with an introduction to the tools and analysis techniques used by climate change scientists to interpret the role of these forcing agents on climate Readers will also gain a deeper understanding of the strengths and weaknesses of these models and how to test and assess them The contributions include a glossary of key terms and a concise definition of the subject for each topic as well as

recommendations for sources of more detailed information Public Perception of Climate Change Bjoern

Hagen,2015-11-06 Despite the findings on global climate change presented by the scientific community there remains a significant gap between its recommendations and the actions of the public and policy makers So far scientists and the media have failed to successfully communicate the urgency of the climate change situation in such a way that long term comprehensive and legally binding policy commitments are being made on the national and international level This book examines the way the public processes information how they perceive threats and other perceptual factors that have a significant effect on how and to what degree climate change mitigation and adaptation strategies are supported

Understanding public risk perception plays a vital role in communicating the challenges of global climate change Using a diverse range of international case studies this book explores the nature of public perceptions of climate change and identifies the perception factors which have a significant impact on the public s willingness to support global climate change policies or commit to behavioral changes to reduce greenhouse gas emissions and improve urban resiliency The comparative study of social and cultural factors beliefs attitudes and trust provides an international overview of best practices regarding the design implementation and generation of public support for climate change policies at a global level Offering valuable insight into climate change and risk communication the book should be of interest to students and scholars of environment studies politics urban planning and media and cultural studies *Delta Sustainability* Weiguo Zhang,Huib de

Vriend,2024-09-30 This book examines sustainability issues of 15 deltas in the world Each delta is described in five sections physical setting socioeconomic characteristics current issues management measures and perspective for future pathways to greater sustainability These deltas diverse in their geographical and economic conditions are all confronted with natural hazards and pollution issues posing threats to ecological health human security and economic development The book offers an overview of delta challenges in an integrated natural and social science approach It is intended for researchers graduate students and the public especially those dwelling in deltas It aims to improve knowledge of the current situation and to enhance awareness of the urgency of collective action to prepare for the uncertain future of these deltas Possible future pathways towards delta sustainability are also addressed in the book *Global Environmental Risk* Jeanne X.

Kasperson, Roger E. Kasperson, 2013-05-13 Despite international initiatives such as the Earth Summit in 1992 and ongoing efforts to implement the Kyoto Protocol human activities continue to register a destructive toll on the planetary environment At root research on global environmental risk seeks new pathways for reversing unsustainable trends curtailing ongoing destructive activities and creating a life sustaining planet This book takes stock of the distinctive challenges posed by global environmental risks the capacity of knowledge systems to identify and characterize such risks and the competence of human society to manage the unprecedented complexity Particular attention trains on engaging in ways conducive to enhancing social learning and adaptation the large uncertainties inherent in these risks Various chapters enlist different scales of analysis to explore the manifestation and causes of global environmental risks in all the diversity of their regional expression Throughout the editors and contributors accord prominence to the vulnerability of people and places to environmental degradation Understanding vulnerability is a neglected key to assessing the nature of the risks and determining strategies for altering trajectories of threat Global risk futures the editors argue are not intractable and are still amenable to a risk analysis enterprise that is democratic in principle humanistic in concept and geared to the realities that pertain to the particular societies locales and regions that will ultimately bear the risk Countdown to Kyoto, Parts I-III United States.

Deltas and Humans Thomas S. Bianchi, 2016-10-03 Humans have had a long relationship with the ebb and flow of tides on river deltas around the world The fertile soils of river deltas provided early human civilizations with a means of farming crops and obtaining seafood from the highly productive marshes and shallow coastal waters associated with deltas However this relationship has at times been both nurturing and tumultuous for the development of early civilizations The vicissitudes of seasonal changes in river flooding events as well as frequently shifting deltaic soils made life for these early human settlements challenging These natural transient processes that affect the supply of sediments to deltas today are in many ways very similar to what they have been over the millennia of human settlements But something else has been altered in the natural rhythm of these cycles The massive expansion of human populations around the world in both the lower and upper drainage basins of these large rivers have changed the manner in which sediments and water are delivered to deltas Because of the high density of human populations found in these regions humans have developed elaborate hydrological engineering schemes in an attempt to tame these deltas The goal of this book is to provide information on the historical relationship between humans and deltas that will hopefully encourage immediate preparation for coastal management plans in response to the impending inundation of major cities as a result of global change around the world
