Ideas That Shaped Buildings M. Fil Hearn, 2003-10-10. Identifying the operative ideas in architectural theory from ancient Rome to the present and codifying them into coherent theoretical systems for students, practitioners, and the general reader. In *Ideas That Shaped Buildings*, Fil Hearn identifies and codifies into theoretical systems the operative tenets of architectural theory from ancient Rome to the present. With this strikingly original synthesis of architectural history and theory, he constructs an intellectual armature on which virtually any architectural concept, past or present, can be positioned. Dealing mainly with the treatises that have been highly influential historically, he organizes their concepts thematically and analyzes their development through time. Straightforward and concise, *Ideas That Shaped Buildings* is readily accessible to architecture students, practicing architects, and the general public. Indeed, anyone interested in understanding the design rationale of buildings. Its overarching message is that far from being constricting, proper knowledge and application of architectural theory is enabling and inspiring and makes creative freedom possible by providing the conceptual awareness needed to devise a design. After an introductory history of the development of architectural theory, the text is divided into four parts. The first deals with issues relevant to all theories of architecture. The second, treating theory from antiquity to 1800, focuses on the prescriptive conventions inherent in the classical tradition. The third, treating theory after 1800, focuses on the inspirational principles prompted by rationalist perceptions of the Gothic tradition. The fourth, treating theory since 1965, deals with rationales beyond rationalism and the influence of computers on design method and design formulation. The concepts discussed are illustrated with theoretical drawings and images of actual buildings.

Jean Sibelius and His World Daniel M. Grimley, 2011-08-08 New perspectives on the greatest Finnish composer of all time Perhaps no twentieth century composer has provoked a more varied reaction among the music loving public than Jean Sibelius 1865 1957 Originally hailed as a new Beethoven by much of the Anglo Saxon world he was also widely disparaged by critics more receptive to newer trends in music At the height of his popular appeal he was revered as the embodiment of Finnish nationalism and the apostle of a new musical naturalism Yet he seemingly chose that moment to stop composing altogether despite living for three more decades Providing wide cultural contexts contesting received ideas about modernism and interrogating notions of landscape and nature Jean Sibelius and His World sheds new light on the critical position occupied by Sibelius in the Western musical tradition The essays in the book explore such varied themes as the impact of Russian musical traditions on Sibelius his compositional process Sibelius and the theater his understanding of music as a fluid and improvised creation his critical reception in Great Britain and America his late style in the incidental music for *The Tempest* and the parallel contemporary careers of Sibelius and Richard Strauss Documents include the draft of Sibelius's 1896 lecture on folk music selections from a roman clef about his student circle in Berlin at the turn of the century Theodor Adorno's brief but controversial tirade against the composer and the newspaper debates about the Sibelius monument unveiled in Helsinki a decade after the composer's death The contributors are Byron Adams Leon Botstein Philip Ross Bullock Glenda Dawn Goss Daniel Grimley Jeffrey Kallberg Tomi M kel Sarah Menin Max Paddison and Timo Virtanen

Mid-Century Modern Interiors Lucinda Kaukas Havenhand, 2019-01-24 Mid Century Modern Interiors explores the history of interior design during arguably its most iconic and influential period The 1930s to the 1960s in the United States was a key moment for interior design It not only saw the emergence of some of interior design's most globally important designers it also saw the field of interior design emerge at last as a profession in its own right Through a series of detailed case studies this book introduces the key practitioners of the period world renowned designers including Ray and Charles Eames Richard Neutra and George Nelson and examines how they developed new approaches by applying systematic and rational principles to the creation of interior spaces It takes us into the mind of the designer to show how they each used interior design to express their varied theoretical interests and reveals how the principles they developed have become embodied in the way interior design is practiced today This focus on unearthing the underlying ideas and concepts behind their designs rather than on the finished results creates a richer more conceptual understanding of this pivotal period in modernist design history With an

extended introduction setting the case studies within the broader context of twentieth century design and architectural history this book provides both an introduction and an in depth analysis for students and scholars of interior design architecture and design history
