Spatial Search Gunther Maier, 2012-12-06 Two areas have fascinated me for a long time One is the micro economic theory of consumer behavior the other one the role of space in economic processes Usually the two don't go together very well In more advanced versions of microeconomic consumer theory its economic actor may face uncertainty have to allocate resources over time or have to take into account the characteristics of products but rarely deals with space He/she inhabits a spaceless point economy Regional Science on the other hand describes and analyzes the spatial structure and development of the economy but either ignores individual decision making altogether or treats it in a rather simplistic way In this book I try to bring together these two areas of interest of mine I do this by use of the microeconomic concept of search and placing it in an explicit spatial context The result in my opinion is a theoretical concept with fascinating implications a broad set of potential implications and numerous interesting research questions After reading this book where I layout the basic idea of spatial search describe its elements and discuss some of its implications I hope the reader will share this opinion There are still plenty of unanswered research questions in this part of economic theory Hopefully this book will stimulate more work along these lines

Schnitzler,2012-12-06 The German Society of Cybernetics organizes international conferences on selected interdisciplinary topics in regular 3 year intervals The aim of these meetings is to bring together scientists who work in quite different disciplines but are confronted with related problems and use the same or similar approaches The topic of the 1983 conference which was held on March 23 25 at the University of Tiibingen came from a typical field of research in which engineers biologists and phySicists share a common interest We do not want to discuss here in detail the common principles which are used by nature and by engineers to solve the problems associated with localization and orientation since the reader will find enough examples in this volume The question however whether the participants of such meetings can really profit from each other deserves some further consid eration First there is the difficulty of finding a common language This still seems to be a problem although in some fields the language of engineers and biologists has become very similar over the years an impression we also gained during the conference Most of the authors made a great ef fort to use a vocabulary which is understandable to people outside their own field of research but admittedly not all succeeded
